

2009

FESTOOL®

Faster. Easier. Smarter.

Welcome to Festool

If this is your first experience with Festool, welcome. For our returning customers, we would like to extend our thanks. Your loyalty in 2008 has allowed us to grow and expand our product line in 2009. By investing in Festool, we hope that you have found yourself working faster, easier, and smarter, and that your work is now both more profitable and enjoyable. We have a great lineup of tools for 2009, and we look forward to continuing our relationship with you for years to come.

I would like to take a minute to address the impact of the economy on your 2009 tool purchase decisions. We understand that you are living in challenging times, and that making the right choices in tools can mean the difference between success and failure. Before making a tool purchase, we think it is important for you to consider the quality of the tool you will be purchasing. Successful professionals won't hesitate to buy a high-quality stationary tool, because it pays for itself in the long run. Should a portable tool purchase be any different? We believe the answer is no, and that all tool purchases should be viewed as long-term investments with a focus on the total cost of ownership.

Festool has a history of producing excellent tools that last for years. Unlike most tools found at the "Big Box" stores, we build tools that are designed to meet performance requirements, not price points. We spend a lot of time with professionals to understand the challenges they are facing. Our tools are designed to solve problems, and they are engineered to exacting tolerances. We manufacture our tools with high-quality materials to withstand the abuse of the jobsite, so that you can remain productive. While this philosophy requires us to build tools that may cost more upfront, we believe that they actually cost less over the life of the tool. I invite you to visit a dealer, try our 30-day money back guarantee, and discover for yourself why so many professionals are switching to Festool.

With our systems approach, each new tool you buy creates additional value. Our guide rails make sawing or routing a perfect line fast, accurate, and splinter-free. Our CT dust extractors speed clean-ups, while keeping the worksite clearer and the air you breathe healthier. Our portable multifunction tables create efficient work spaces in the shop or in the field. Our Systainers®, Sortainers, and Sys-Ports keep everything organized and mobile. And, our consumables are designed to last longer while giving you great results. Add tool-less blade, bit, and abrasive changes and work becomes both efficient and enjoyable.

The entire Festool team is committed to making the highest quality, most durable and best performing tools in the market. Around the world, Festool has earned its reputation as the preferred tool for professionals. So, enjoy this year's product offering, and get ready to work faster, easier, and smarter. After all, it is not just a tool, it is a Festool!

Christian Oltzscher
President and CEO
Tooltechnic Systems, LLC*

*Tooltechnic Systems, LLC (herein after "Festool USA") is the exclusive US importer of Festool power tools, which are designed in Germany by members of the TTS Tooltechnic Systems Group.

* Festool USA is a division of Tooltechnic Systems, LLC.

A history of quality and innovation.

What is the driving force behind Festool? It is a passion for quality and a history of innovation that continues to this day. In 1929, when Albert Fezer and Gottlieb Stoll developed the first portable chainsaw, little did they know that the company they founded would be an industry leader, designing and developing superior tools for the way tradespeople work.

At Festool, our reputation has always been built on attention to detail, ergonomic design, safety, and unyielding precision. Our tools are designed to solve problems and facilitate the highest-quality workmanship.

This commitment sets us apart in the industry. Our product developers visit shops throughout the world, paying close attention to how work is done. Our tools are then designed to eliminate redundancy, or combine steps, tighten tolerances, improve accuracy, and help tradespeople deliver a superior finished product.

Our past uniquely positions us for the future. Festool is still privately held by one of the original founding families. Each employee is dedicated to the company's goal of delivering a one-of-a-kind experience and superior tools.

Throughout the years, Festool has continued to set benchmarks for the industry with the introduction of the first orbital sander, the first eccentric sander, the Rotex® dual-mode sander, the first brushless drill driver, and the revolutionary Domino® tenon joiner.

Tools to help you work faster, easier, smarter.

“Woodworking is not only a passion, but my livelihood. Festool is No. 1 on my list. From quality of tools to the great customer support, they are the best. I have replaced another brand with Festool, but have never replaced a Festool with another brand. That tells you something.”

Mark A., California

“Working with Festool is like all other German-engineered equipment. Ease of use is like no other, quality of materials used are superior, but unlike any other, its intelligence and smarter way of execution is second to none. Having Festool in your hands is your only solution to achieving ‘Perfection’!”

Leo M., Delaware

"If the result of our work at Festool is not better than everything else on the market, we prefer not to come out with the tool at all."

Bernd Fleischmann, Festool Engineer

"Festool really shines with such excellent tools. I am completely impressed with how the tools make my work so much faster, easier, and smarter: from layout to cutting to final assembly. Please keep up your excellent engineering and innovations!! From your happy and elated customer who enjoys woodworking."

Veasna H., California

Setting the standard

Innovation has been the foundation of Festool since its inception. In 1929, the company introduced the first portable chain saw, which brought the mill to the forest and transformed the logging industry.

Festool designs tools that change the way people work; saving steps, improving quality and enhancing safety. Through the years, we have set the standard for the industry, with such breakthrough tools as:

First orbital sander in 1951

First saw/guide rail system introduced in 1964

First eccentric sander in 1976

First plunge-cut saw in 1980

Dual-mode Rotex RO 150 E in 1984

Systainer system in 1993

CT Dust extractors in 1999

Cordless drill with brushless motors in 2005

Domino® joiner in 2007

We design our tools:

To solve problems.

We create products that meet a need, streamline a process, or improve quality and efficiency.

For the way work happens.

From rough work to assembly, finishing and storage, we keep every function of the tool in mind.

With your comfort in mind.

We limit the noise and vibration of our tools, and carefully balance them to feel comfortable in your hands.

To save time.

Our tools are easy to use and adjustments are easy with tools onboard and features, such as our FastFix® blade and bit changes, StickFix® hook and loop abrasives, and Plug-it quick change power cords.

For quality, reliability and flawless execution.

We measure quality in terms of microns and parts per million, to deliver parts that are 99.99% perfect!

For healthier environments.

Integrated dust extraction is designed into nearly every product we offer, keeping the work area cleaner and the air you breathe healthier.

For portability.

With our Systainer® system, you do not sacrifice quality for mobility. Systainers organize tools and accessories and stack to create a mobile workshop.

As part of an integrated system.

Our tools are designed to work together to be more efficient and effective. This integration improves workflow and enhances the overall value of the tools and accessories.

Faster. Easier. Smarter.

Because Festool products all work together in a completely integrated fashion, every piece adds value to the entire system. This allows you to work faster, easier, and smarter.

Dust extractors

Our tools are designed for optimal dust extraction.

Multifunction tables

Portable work surface for the workshop or jobsite.

Guide rails

In nine lengths from 32" – 197" (800 mm—5000 mm).

Systainers®

House your tools, accessories and consumables.

The Festool system

The Festool system is at the heart of our product design. Four core elements integrate each tool into a foundational system of products: Dust extractors, Multifunction tables, Guide rails, and Systainers. The manner in which our products work together makes each one function more efficiently, effectively, and accurately.

Dust extractors

Dust extraction keeps your work area cleaner with less dust. Our dust extractors feature variable speed control to accommodate a range of tools and materials, an antistatic hose that reduces dust buildup, and the main HEPA filter, which filters .3 microns (standard on CT 22 and 33 and an accessory option on CT MINI and MIDI.) Our tools are designed upfront to work seamlessly with our dust extractors—increasing efficiency, reducing airborne particulates, and extending the service life of your tools and consumables.

Multifunction tables

Available in two sizes, the Multifunction table (MFT/3) combines functionality, precision and portability to make it the perfect work surface for the workshop or the jobsite. The table top incorporates a precision indexed grid hole system (perforated plate) and high-density MDF to enable easy clamping. The MFT/3 seamlessly handles cutting, drilling, sawing, sanding, and routing functions. Also, multiple MFT/3s can be linked together to form extended workstations.

Guide rails

Festool invented the guide rail more than 45 years ago to enhance precision for the most demanding applications. The guide rails are available in nine lengths designed to meet your needs. Key advantages of the guide rail system include the elimination of laborious measurement and set-up, rework and wasted material. A multitude of accessories are also available, to suit your specific application. Key advantages of the guide rail system include the elimination of laborious measurement and set-up, rework and wasted material. Each guide rail is equipped with a patented splinterguard that accurately defines the cut line and can be used with Festool plunge-cut saws to get splinter-free results on both sides of the blade. Available accessory bases allow Festool routers and jigsaws to also be used with the guide rails.

Systainers®

A revolutionary and award-winning system for organizing, packing and transporting tools, accessories and consumables, Systainers and Sortainers keep everything organized and make the workplace more efficient. Their flexible, modular design saves time and space, and puts everything you need within reach. Different sizes stack on top of each other or in Systainer-Ports (Sys-Ports) for maximum utilization of space and unsurpassed portability.

The value of quality

Value can be measured in many ways—dollars and cents, time, reputation, quality, environmental stewardship and productivity. In all of these ways, both qualitative and quantitative, Festool brings value to every project.

Time

In business, time is one of the most important cost factors. Festool products have been carefully designed to fit and work together. Systainers, integrated dust extraction, and the system based on quick and easy setups, all save time, allowing projects to be completed quickly and efficiently.

Cost

When you purchase a single Festool product, you invest in years of quality and precision. Our tools are designed and built to last, with one of the strongest warranties in the industry. And, because each Festool product is part of an integrated system, each piece increases the value of the whole. The more Festool products you use, the higher your productivity and the more you save.

Quality

We measure our manufacturing quality in microns and parts per million, ensuring that our tools are the most accurate tools available. When tools are this precise, they last longer, minimize damage to expensive materials, reduce rework, and increase accuracy.

Longevity

Festool products are made to last—designed, engineered and manufactured of high quality materials to withstand rugged workshop or jobsite environments. Each of our accessories is designed to enhance the tool's performance, and our consumables are engineered to last longer and perform better.

Comfort

The ergonomic design of each tool adds to the comfort of the tradesperson. Our tools are easy to use and safer to handle. They feel comfortable in your hands, with lower vibration and easy access to operational controls. Air quality is also improved given the integrated dust extraction that is incorporated into the tools.

Professionalism

With Festool, you can bring everything you need to the job in one mobile workstation. Our tools enable you to work faster and more accurately, produce a better finished product, complete the job quickly, and cleanup the jobsite with ease.

Awards and honors

Our tools have been honored with various awards for quality and innovation. The past few years, our tools have been honored with the following awards:

This year, Festool is proud to introduce three new products: EHL 65 One-handed planer, and T 12+3 and T 15+3 Cordless drills. These products continue Festool's history of innovation—making work faster, easier, and smarter.

T12+3 / T15+3 Cordless Drill/Driver

The T+3 drills represent the most evolved and intelligent cordless drills available in the market today. They are equipped with long-lasting, highly efficient brushless motors for longer run-times and service life.

Lithium Ion batteries offer lighter weight, no memory issues of past technologies (Nickel Cadmium), no self-discharge and higher energy density. No more over-torqued screws with the instant electronic clutch cut-out. And with a separate clutch control, you no longer lose your favored clutch setting when switching from drilling to driving mode.

Only a drill this advanced and intelligent can be backed with a three-year warranty on the drill, batteries, and charger.

See page 131 for more details.

EHL 65 E One-handed planer

The EHL can take on the toughest demands, even with its one-handed operation. Because of its 6.0 amp, 720 watt motor, and spiral cutter head, you can achieve perfectly smooth cuts. The spiral head design not only provides a super smooth cut, but knife changes are a breeze using a single insert knife.

The one-handed control and low weight allow you to trim material in place. And, at only 76 dB (A), the EHL 65 is easy to use on the job and easy on the ears.

See page 112 for more details.

Parallel guide and extension

The parallel guide and extension attaches to any length FS guide rail with adjustable stops for cross cuts and rip cuts. Two contact points ensure consistent cuts every time by referencing the edge parallel with the cut.

Unlike a right angle attachment, the parallel guide does not rely on perpendicular reference points. And, it keeps the guide rail cut line in alignment with the edge.

Make consistent repeated cuts for shelves, case sides, cabinet parts, trim boards, fillers, and long rip cuts. The parallel guide also breaks down for easy transport and storage. It is lightweight, accurate, and easy to use.

See page 33 for more details.

Kapex extension set

Support and accurately cut material up to 90-1/2" long. Create accurate and repeatable cuts with the flip of the included flag stops on either side of the Kapex. Contains tool-free adjustable stops, supports and integrated rulers for fast and easy setups and measured cuts. Attaches to crown stops and is supplied with tie bars that attach to the MFT for a rock-solid set-up.

See page 66 for more details.

Festool has many other new accessories and consumables for 2009. These can be found throughout the catalog and are indicated with the "NEW ITEM" icon.

Dust extractors

As important as the air you breathe.

Dust control is an integral part of the Festool system and design philosophy.

We believe you will find our dust extractors to be among the best in the industry, with features not found on other vacuum systems. Festool offers a full line of dust extractors optimized for the way you work.

For any job – big or small.

At Festool, we do not think only in terms of tools, but also about systems that help you work faster, easier, and smarter. CT Dust extractors are a major component of the system and work with most of our tools.

Both practical and lightweight, the CT MINI and MIDI are best suited for smaller jobs or when compact portability is a priority. Both contain an integrated Sys-dock and hose garage to conveniently store the hose in an organized manner. The CT MIDI is just slightly larger to handle larger tasks.

The CT 22 and 33 are larger and more suited for all-around performance, perfect for the shop or jobsite. They come standard with HEPA filters and can be combined with the Boom arm for expanded versatility in the workshop, or with a rear-mounted handle for increased mobility.

Festool Tip: For wet extraction with the CT 22 and CT 33, use the dirt trap (see page 25) to contain liquids for easy removal. Also, be sure to replace the filter with a wet filter element (see page 24), specially made for wet applications, to avoid damage to the filter.

Faster.

- Extract the dust automatically with tool-triggered activation.
- Improve transportation and organization using the integrated Sys-Dock to attach Systainers.
- Switch tools quickly with the simple, pressure-fit hose connector.

“I am a property manager and care for some of the finest homes in Michigan. I sometimes have to modify cabinets in their kitchens or bedrooms and they absolutely love it when they cannot find any trace of my having been there, due to my CT 33 dust extractor.”

Jeff V., Michigan

Easier.

- Reduce dust build-up with the included antistatic hose.
- Move easily around the jobsite with the carry handle and oversized wheels.
- Avoid tripping hazards with the built-in cord storage.

“Powerful, quiet, clean, mobile, and handy to use with other Festool tools. The square body is excellent for storage and the top is also a very convenient place to store tools.”

Igor K., New York

Smarter.

- Enjoy cleaner air with the 99.99% dust-free HEPA filters.
- The motor is completely isolated from the dust bin, which significantly prolongs the lifetime of the motor.
- Adjust the cubic feet per minute (CFM) setting, for improved results or reduced sound.

“The CT 22 and its amazing dust collection has made it possible for me to work on exotic hardwoods in which I have had extreme allergic reactions in the past. It has opened doorways to woods that I have feared for years! Thanks!”

Mario D., Montana

Festool Tip: For best results when sanding, adjust the stepless, variable speed setting toward the turtle icon to lower the CFM rating. This will reduce the likelihood of creating swirl marks in the finish caused by too much pressure being applied to the wood surface while sanding.

Festool Fact: HEPA filters (high-efficiency particulate air) were first developed by the Atomic Energy commission to remove radioactive dust from industrial exhaust and have become the preferred filtration system for most sensitive manufacturing and healthcare environments.

CT MINI and CT MIDI | High performance and portability

The CT MINI and CT MIDI are Festool's most portable mobile dust extractors. They are compact and lightweight, yet have enough capacity for common jobsite tasks. The CT MIDI is slightly larger in size, but offers increased capacity for heavier on-site use. Sporting large wheels and double casters, these units can easily negotiate obstacles in the shop or on the worksite. With 99 CFM and only 62 dB (on low setting), these CTs can quickly and quietly remove large amounts of debris, with minimal noise.

Integrated Sys-dock and hose garage

Cords and hoses conveniently store in the onboard hose garage, while the flat top and locking latches allow you to attach one or more Systainers.

Filter bag

Disposable, two-ply filter bags are particularly tear-resistant; an integrated dust cap prevents dust from spilling during disposal.

Tool-less main filter and automatic water level detector

The main filter can be changed without using tools. The internal sensors monitor the fluid level, for wet applications, and switch the mobile dust extractor off automatically when the container is full.

Automatic tool start/Adjustable suction

Smooth start, infinitely adjustable electronic air flow control and tool-triggered or manual on/off switch ensures convenient and efficient dust control.

Convenient carry handle

The ergonomic handle makes maneuvering these small and light dust extractors a breeze.

Foot brake

Quick on/off foot actuated brake prevents roll-off during usage or during transport.

Antistatic hose

As with all CT dust extractors, the 1-1/16" x 11.5' (27 mm x 3.5 m) antistatic hose comes standard.

Large wheels

Large wheels, low center of gravity, and ergonomically balanced design allows you to move the CT effortlessly around the jobsite.

Mobility

The manageable size makes it easy to transport or carry up stairs.

CT 22 E and CT 33 E | All-around, large capacity

The CT 22 and CT 33 are Festool's most powerful mobile dust extractors. With a sturdy chassis, extra large wheels, and double casters, these units can easily negotiate obstacles in the shop or on the worksite. With 134 CFM and only 62 dB (on the low setting), these CTs can quickly and quietly remove large amounts of debris, with minimal noise. HEPA filters come standard and offer the ultimate in clean air and filtration.

HEPA filters

HEPA filters are standard and remove 99.99% of particulate to .3 micron.

Automatic tool start and adjustable suction

Smooth start, infinitely adjustable electronic air flow control and tool-triggered or manual on-off switch.

Bypass blower port

The bypass blower port allows you to evacuate unpleasant odors and fumes from the jobsite, by attaching an additional hose.

Sys-dock and antistatic hose

The flat top with locking latches allows you to transport tools and accessories securely and conveniently when used with a Festool Systainer. As with all CT dust extractors, the 1-1/16" x 11.5' (27 mm x 3.5 m) antistatic hose comes standard.

Filter scrubber

The convenient scrubber handle removes accumulated dust and debris from the internal filter, without the need to open the machine, and improves air circulation across the motor.

Automatic water level sensor and optional dirt trap

With wet applications, the internal sensors monitor the fluid level and switches the dust extractor off when the container is full (dirt trap available as an accessory).

Cord storage

Everything needs its own storage space. The cord can be wound on the dedicated cord wrap to prevent it from getting in the way during transportation.

Tool-less filter changes

If there is ever a need to change filters, or if you want to switch to a sponge filter for wet applications, changing the filter is very easy. The flat filter can be changed without using tools.

Highly transportable

Generously-sized lockable casters and ergonomic center handle, which is positioned for comfortable lifting and carrying, increases mobility.

**Accessories
that help you work
faster, easier, smarter.**

The beauty of the Festool system can be seen in the way the accessories work together with the CTs to enhance functionality and to accommodate a wide variety of applications. From cleaning sets to hoses, hose sleeves, tubes, floor nozzles, and filters, our accessories are much more than add-ons, they are an integral part of the Festool system.

Cleaning Sets							
1	Compact cleaning set Keep this compact set docked to your CT for quick and easy access. Featuring rigid, lightweight, and crack-resistant polypropylene tubes and nozzles. Includes: Systainer 1 [445 433] 36 mm Polypropylene curved hand tube [452 901] 36 mm Polypropylene extension tube [452 903] (3 pieces) 36 mm Polypropylene interchangeable floor nozzle [452 906] 36 mm Polypropylene crevice nozzle [452 904] 36 mm Polypropylene upholstery nozzle [440 406]	●	●	●	●	456 736	\$75.00
2	Universal cleaning set General purpose cleaning set at an economical price. Includes: Systainer 4 [445 597] 36 mm non-antistatic hose (11.5') length [452 882] 36 mm Polypropylene curved hand tube [452 901] 36 mm Polypropylene extension tube [452 903] (3 pieces) 36 mm Polypropylene standard floor nozzle [452 907] 36 mm Polypropylene crevice nozzle [452 904] 36 mm Polypropylene upholstery nozzle [440 406] 36 mm Polypropylene suction brush [440 404]			●	●	454 769	\$140.00
3	Tradesperson/installer cleaning set Ideal for clean-up on the jobsite, especially if it is residential. Includes: Systainer 4 [445 597] 36 mm Antistatic hose—3.5 m (11.5') length [452 882] 36 mm Stainless steel curved hand tube [452 900] 36 mm Stainless steel extension tube [452 902] (3 pieces) 36 mm Polypropylene multi-purpose floor nozzle [452 911] 36 mm Polypropylene crevice nozzle [452 904] 36 mm Polypropylene upholstery nozzle [440 406] 36 mm Polypropylene suction brush [440 404]			●	●	454 766	\$205.00
4	Workshop cleaning set A heavy-duty cleanup set for commercial or home shop use. Includes: Systainer 4 [445 597] 36 mm Antistatic hose (11.5') length [452 882] 36 mm Stainless steel curved hand tube [452 900] 36 mm Stainless steel extension tube [452 902] (3 pieces) 36 mm Aluminum industrial floor nozzle [452 908]			●	●	454 767	\$235.00
5	Industrial cleaning set Large diameter tubes and hose tackle large debris for the biggest cleanup tasks. Includes: Cardboard box 50 mm Non-antistatic hose 2.5 m (8.25') length [452 887] 50 mm Polypropylene extension tube [440 412] (2 pieces) 50 mm Polypropylene workshop floor nozzle [452 909] 50 mm Polypropylene square nozzle [440 416] 50 mm Polypropylene large crevice nozzle [452 912] 50 mm Polypropylene suction brush [440 419]			●	●	454 770	\$103.00

Hoses—Antistatic¹ With rotating connector (extractor end) and reducing sleeve (tool end). Antistatic properties prevent errant shocks and to prevent dust particle buildup. Using an antistatic hose requires a dust extractor equipped to handle static discharge. Festool CT dust extractors are designed with this in mind.							
1	1-1/16" x 11.5' (27 mm x 3.5 m) AS	●	●	●	●	452 878	\$93.50

13	1-15/16" x 8.25' (50 mm x 2.5 m)			●	●	452 887	\$69.00
14	1-15/16" x 13' (50 mm x 4 m)			●	●	452 889	\$95.50
Hose Sleeves - Rotating connector (replacement) For extractor end of hoses. Black colored connectors are for use with antistatic hoses and the gray colored connectors are for use with non-antistatic hoses.							
15	Antistatic ¹ version for D 50 mm suction hose			●	●	452 896	\$24.00
16	Antistatic ¹ version for D 36 mm suction hose			●	●	452 894	\$21.00
17	Antistatic ¹ version for D 27 mm suction hose			●	●	452 892	\$17.50
18	Non-antistatic version for D 50 mm suction hose			●	●	452 895	\$21.00
19	Non-antistatic version for D 36 mm suction hose			●	●	452 893	\$17.50
20	Non-antistatic version for D 27 mm suction hose	●	●	●	●	452 891	\$14.50
Hose sleeves—Reducing sleeves (replacement) For tool end of hoses or use with cleaning sets, tubes, nozzles and brushes.							
21	With rotating adapter for D 27 mm suction hose Tool end of extraction hose for our standard 27 mm hose.	●	●	●	●	487 071	\$17.00
22	Antistatic¹ version with rotating adapter for D 36 mm suction hose Tool end of extraction hose for our mid-sized 36 mm hose.			●	●	487 721	\$17.50
23	Antistatic¹ angle adapter Elbow hose end for connection in CT MIDI or CT MINI.	●	●			456 806	\$22.50
24	Antistatic¹ connector sleeve² Connects suction hoses D 50 mm/D 36 mm/D 27 mm. Connects rotating connector (extractor ends) together. Tapered fit.			●	●	493 047	\$14.50
25	Non-antistatic hose reducer For reducing from 50 mm to 36 mm hose or when connecting 36 mm to 27 mm hose.			●	●	452 897	\$12.50

¹ Antistatic versions are only effective when used with antistatic design (Festool's CT series) dust extractors.

		Compatibility					
No.	Description/Application	CT MINI	CT MIDI	CT 22 E	CT 33 E	Item	Price
Hose sleeves—Reducing sleeves (continued)							
26	Antistatic¹ Y-piece with blanking plug³ Connects two suction hoses to the dust extractor. Includes blanking plug to cap off unused inlet.			●	●	452 898	\$31.50
27	Blanking plug Seals inlet to prevent back flow of dust and debris during storage and transport.			●	●	452 899	\$10.50
Tubes—Curved							
28	Stainless steel Connects tubes to extraction hose for comfortable grip. Stainless steel resists corrosion and is long-lasting.	●	●	●	●	452 900	\$46.00
29	Polypropylene (PP) with air regulating slide to adjust suction power Connects tubes to extraction hose for comfortable grip. Rigid, lightweight, and crack-resistant.	●	●	●	●	452 901	\$17.50
Tubes—Extension							
30	Stainless steel Resists corrosion and long-lasting. Works with 27 & 36 mm hoses. 3 pieces, 37-1/2" (950 mm) D 36 mm	●	●	●	●	452 902	\$51.50
31	Non-antistatic polypropylene (PP) Rigid, lightweight, and crack resistant. 3 pieces, 37-1/2" (L = 950 mm) D 36 mm	●	●	●	●	452 903	\$21.00
32	One-piece anodized aluminum Large diameter tube for large clean-up chores for use with 50 mm diameter hoses and accessories. 43-1/2" (L= 1100 mm) D 50 mm			●	●	447 599	\$123.00
33	Non-antistatic plastic 2-piece, 38" (L= 970 mm) D 50 mm			●	●	440 412	\$31.50
Floor nozzles/brushes							
34	Industrial floor nozzle Heavy-duty industrial design; aluminum. Width 14-5/8" (370 mm); 2 casters, 2 brush inserts. Accepts D 27 mm & D 36 mm hose.	●	●	●	●	452 908	\$123.00
35	Large industrial floor nozzle High-quality industrial design; aluminum. Width 17-11/16" (450 mm); 2 casters, 2 brush inserts. Accepts D 50 mm hose.	●	●	●	●	452 910	\$139.00
36	Replaceable wearing parts Brush insert D 36 mm, casters. For 452 908 nozzle.	●	●	●	●	452 934	\$18.50
37	Replaceable wearing parts Brush insert and casters. For 452 910 nozzle.	●	●	●	●	452 935	\$22.00
38	Retrofit kit water extraction Brush insert and casters. For 452 908 nozzle.	●	●	●	●	452 936	\$22.00
39	Retrofit kit water extraction Rubber lips and casters. For 452 910 nozzle.	●	●	●	●	452 937	\$28.00

¹ Antistatic versions are only effective when used with antistatic design (Festool's CT series) dust extractors.

² With D 36/D 27 hoses, the reducing sleeve for the hose must be replaced by a D 36/D 27 rotating connector.

³ For simultaneous connection of two electric tools with dust extraction.

Floor nozzles/brushes (continued)							
40	Standard floor nozzle Polypropylene. Width 11-13/16" (300 mm). 2 casters, 2 brush inserts. For use with 27 mm. 36 mm hose and tubes.	●	●	●	●	452 907	\$32.50
41	Workshop floor nozzle Polypropylene. Width 14-5/8" (370 mm). 2 casters, 2 brush inserts. For use with 50 mm hose and tubes.	●	●	●	●	452 909	\$53.00
42	Interchangeable floor nozzle 4-piece, plastic. With 3 replaceable inserts. For use with 27 mm and 36 mm hose and tubes. Brush insert for carpet, rubber insert for wet extraction, and vented insert for hard surfaces.	●	●	●	●	452 906	\$28.00
43	Multi-purpose floor nozzle Dual position brush height adjustment adjusts from carpet to smooth floor surfaces. Accepts 27 & 36 hoses and tubes. 36 mm recommended for greater extraction efficiency.	●	●	●	●	452 911	\$49.50
44	Turbo suction brush Suction-activated turbine roller brush for carpet and hard surface with 4 casters. Width 10-5/8" (270 mm). Requires 36 mm hose.			●	●	450 644	\$107.00
Special nozzles/brushes							
45	Suction brush Plastic, dia. 2-13/16" (70 mm). Fits 27 & 36 mm hoses and tubes.	●	●	●	●	440 404	\$11.50
46	Upholstery brush Plastic, with brush insert width 4-11/16. (120 mm). Fits 27 & 36 mm hose and tubes.	●	●	●	●	440 406	\$8.50
47	Universal brush nozzle Plastic, brush ring 4-11/16" x 1-5/8. (120 x 40 mm). Fits 27 & 36 mm hose and tubes.	●	●	●	●	440 403	\$14.00
48	Large crevice nozzle Plastic, length 14-5/8" (370 mm). For use with 50 mm hose and tubes.			●	●	452 912	\$17.50
49	Crevice nozzle Plastic, length 14-5/8" (370 mm). Fits 27 & 36 mm hose and tubes.	●	●	●	●	452 904	\$8.00
50	Bevel ended nozzle Flexible rubber, length 7-1/2" (190 mm), outside diameter 1-5/8" (40 mm). For use in general shop clean up and with 36 mm hose and tubes.	●	●	●	●	411 810	\$24.50
Other accessories							
51	Spark trap Helps to protect extractor when machining pieces that may generate sparks. Connect between hose and extractor. Works with 27, 36, & 50 mm hose diameters.			●	●	484 733	\$114.00
52	Handle Improves mobility of the CT 22 and 33. Required for mounting Boom Arm 492 753.			●	●	452 921	\$74.50
53	Suction hose holder Raises hose to table height to help prevent trip hazards.			●	●	487 072	\$33.50
54	Hose hook Allows for hose to be wound and stored on the front of the CT.			●	●	452 998	\$35.00
55	Dirt trap Collect and remove liquids without having to move the vacuum. Includes screen filter top.			●		452 925	\$94.00
56	Dirt trap Insert bucket for wet extraction. Collect and remove liquids without having to move the vacuum. Includes screen filter top.				●	452 926	\$110.00
57	CT adapter plug Replacement. Adapts the 20 amp CT plug to fit in standard 15 amp outlets.	●	●	●	●	493 232	\$12.50

		Compatibility

	20 pieces			●		494 631	\$103.00
	20 pieces				●	494 632	\$114.00
67	Longlife filter bag (re-usable bag / at least 500 fillings) Economical solution for capturing and eliminating large chips produced by routing or planing. Re-sealable.						
	For CT 22 E			●		456 737	\$192.00
	For CT 33 E				●	456 738	\$200.00

Guide rails

Invented by Festool.

The guide rail and the Festool brand go hand-in-hand. After all, who else besides the inventor can look back fondly over more than 45 years? Festool applies immense experience in producing guide systems and accessories for the most demanding applications, continuously striving to achieve perfect working results faster, easier, and smarter.

Ride the rail.

Another important part of the system is the FS guide rails. The nine guide rails are offered in eight lengths and ensure a proper length for every application. Special connectors allow you to mix and match sizes to create the exact configuration for your application.

Of the nine sizes available, Festool offers seven standard FS guide rails. Our most popular sizes are the FS 1400 55" guide rail for cross-cuts and the FS 2700 106" rail to cut the full length on standard sheet goods (with the TS 55 plunge-cut saw).

Also available are two sizes in the hole series. A special indexed guide rail system using the hole drilling set makes fast work of placing perfect 32 mm shelf pins and 35 mm holes for European hinges in cabinets.

Every FS guide rail can be used in combination with Festool plunge-cut saws, jigsaws, and routers ensuring precise, repeatable results.

Festool Fact: Index shelf pin holes effortlessly with perforated FS LR 32 guide rails (see page 31) using the LR 32 set (see page 91) with Festool routers. Compatible with Festool plunge saws with the incorporated splinterguard. They can also be used with Festool OF routers with guide stops for guided routing, fluting, and dados.

Faster.

- The cut mark matches the cut-line with the zero-clearance guide rail.
- Set-up quickly with non-slipping bottom strips.
- Repeat cuts with limit stops—just set it and forget it.

"The guide rail and OF 1400 router made an incredible difference in both speed and precision for a project that required the boring of three hundred 20 mm holes."

Gary H., Nebraska

Easier.

- Guidance of plunge saws or routers is nearly effortless.
- System integration—same rail for saw, router, or jigsaw.
- Clamping with bottom T-slot—keeps clamps out of the way.

"The guide rail is genius, and with it, your quality of work skyrockets. Glass smooth and dead straight cuts, quick to set up and repeatable results equals money in the bank."

Mark T., California

Smarter.

- Reduce surface friction with the saw base plate due to the glide strips.
- Portable, lightweight, and precise.
- Create custom lengths with guide rail connectors.

"I love how easy it is to use the guide rail system. It made setup a snap and no need to worry about slipping—the tools fit great in the rails."

Nathan E., New York

Festool Tip: Compact, lightweight, and ready to go, the FS guide rail accessory kit (see page 32) includes all the most common items needed for use with the guide rails, whether working with TS plunge-cut saws, OF plunge routers, or PS jigsaws. All stored in a Systainer for better organization and easy access.

Festool Tip: To protect the rails and for easier transport, consider the guide rail tote bag. The guide rail tote bag (see page 32) accommodates two rails up to 55" long (1400 mm). The front pocket is large enough for one 32" (800 mm) rail and rail connectors.

FS/2 | Many sizes to choose from

Festool FS Guide rails are available in eight different lengths from 32" to 16.5' (800 - 5000 mm), providing the right rail for every application. In addition, guide rails can be connected via guide rail connectors and the integral t-slot design for a rigid, secure, and continuous connection. This allows for customized cutting lengths or for easier transport to the jobsite and for shop storage. The integrated splinterguard serves as protection against tear out as well as defining the cut line when used with Festool plunge-cut saws. Guide rails make work easier by bringing the tool to the work.

Integrated splinterguard

Serves as cut line and prevents tear-out and splintering of the cut, for perfect cut results.

Glide strip

Reduces friction between the tool and the guide rail for easier, more fluid cutting action.

System integration

Though originally designed for use with Festool plunge-cut saws, guide rails are a perfect match for routers and jigsaws.

Non-skid, self-clamping strips

Dual clamping strips on the bottom prevent movement during the cutting operation—less set-up time and better results.

Limit stops

Accessory limit stops provide front and rear stop positions for accurate and repeatable cuts. Fully adjustable over the entire length of the rail. Can be used with TS plunge saws, OF plunge routers, and PS jigsaws.

Available in many lengths

From 32" (800 mm) to 16.5' (5000 mm)—a variety of lengths for cross-cutting and ripping standard sheet goods, as well as processing lumber and trimming parts.

Ability to connect together

Utilizing the integrated T-slots, rails can be joined using guide rail connectors. Rails can be quickly disassembled for storage and transport.

Clamp integration

In addition to the two integrated gripping strips to prevent guide rail movement, there is also a continuous T-slot on the bottom for unobtrusive clamping.

Lightweight

Extruded aluminum profile is robust and lightweight.

Festool Tip:

Festool FS guide rails provide an open T-slot on the top for the use of limit stops or attaching Gecko clamps (see page 32). Use Gecko clamps when machining materials of a non-porous nature; i.e. solid surface, melamine, solid fiberglass, Plexiglas, plastics, pre-finished materials, etc.

Accessories that help you work faster, easier, smarter.

The beauty of the integrated Festool system can be seen in the way the accessories work together with the guide rails to enhance functionality and to accommodate a wide variety of applications. From deflectors, stops, and Gecko clamps to FS quick clamps and connectors, our accessories are much more than add-ons, they are essential to maximizing the usefulness of the Festool system.

No.	Description/Application	Item	Price
1	Deflector Tool-free connection to guide rails via the T-slot and thumbscrew. Helps to prevent the suction hose and cords from catching on the end of the guide rail for easier cord and hose management.	489 022	\$16.00
2	Limit stop Provides front and rear stop position on guide rail using the continuous guide rib or T-slot. For use with TS saws, OF routers, or PS jigsaws.	485 827	\$25.50
3	Limit stop Using the continuous T-slot on the top of the rail, the limit stop can be used to provide stop points for accurate and repeated cuts. For use with TS saws and optimized for use with OF routers.	491 582	\$9.50
4	Guide rail tote bag Transport and store rails up to 1400 mm. Bag can store 2 rails up to 1400 mm in the main pocket and another 800 mm rail in the front pocket. The most ideal way to transport rails, the bag has both cloth strap handles, as well as a shoulder strap.	466 357	\$89.50
5	Gecko Equipped with dual quick-release suction cups for lifting and carrying loads up to 110 lbs Great for moving non-porous material and sheet goods.	492 617	\$59.50
6	Gecko set Attach the Gecko clamp to clamp FS guide rails on non-porous materials. Lever actuated suction cup pads. Includes 492 616 and 492 617. [Guide rail not included]	493 507	\$68.50
7	Gecko guide rail adapter For attaching Gecko clamp to FS guide rails. Included with the above Gecko set. [Guide rail not included]	492 616	\$19.00
8	Gecko pad (replacement) Flexible rubber suction cup pad. Screw-on replacement for Gecko unit.	493 307	\$14.00
9	Guide rail accessory kit Set angles with the included angle unit, limit stop for repeated stopped cuts, deflector to manage the cord and hose, clamp with the screw clamps, 2 connectors to join rails for greater length, and a replacement splinterguard for splinter-free cuts. Includes: Angle unit (491 588), Return/limit stop (491 582), Extra splinterguard (1400 mm) (483 164), Deflector (489 022), 2 connectors (482 107), 2 screw clamps (489 570), in Systainer 1 with molded insert (445 433)	492 396	\$179.00
10	Splinterguard (replacement) Adhesive-backed splinterguard to maintain splinter-free cut quality.		
	FS-SP 800 (32")	488 468	\$9.50
	FS-SP 1400 (55")	483 164	\$13.00
	FS-SP 3000 (118")	488 467	\$19.00
11	Non-skid strip (replacement) Non-slip adhesive strips to maintain the self-clamping feature of the guide rails, in 32.8' (10 m) roll.	485 724	\$21.00
12	Glide strip (replacement) Adhesive PTE plastic glide strip for FS/2 guide rails, in 32.8' (10 m) roll. Green in color and slightly crowned to reduce drag for smooth and easy cuts.	491 741	\$29.50

No.	Description/Application	Item	Price
1	FS-Rapid clamp and fixed jaws Mounts to the guide rails via the continuous bottom T-slot for limitless adjustability. Fast acting trigger makes for quick set-up. Clamps material on edge. (1 piece)	489 790	\$42.00
2	Angle unit Connects to the upper T-slot of FS guide rails for setting angles on material. 180 degree marked scale. Transfer angles from the wall to the workpiece.	491 588	\$78.50
3	Connector Connects two guide rails for long workpieces by sliding into the T-slot grooves in the rails. With 2 adjustable set screws per end for a secure connection. (1 piece) [2 are needed]	482 107	\$15.00
4	Quick clamp Ratcheting mechanism allow for easy lock and quick release and a secure grip on the material. Utilizes bottom T-slot of guide rail for limitless positioning. For use with FS guide rails and MFT. (1 piece)	491 594	\$38.00
5	Screw clamps Traditional screw clamp design with unique head to be used in the bottom continuous T-slot of the guide rails to securely clamp to material. (2 pieces)		
	Clamping thickness 4 11/16" (120 mm)	489 570	\$35.00
	Clamping thickness 11 13/16" (300 mm)	489 571	\$44.50
6	Parallel guide Always rip consistent cuts with two adjustable stops that engage the edge parallel to the cut. Adjustable to 25-19 3/32" (650 mm). (Guide rail not included).	495 717	\$230.00
7	Parallel guide extension Make narrow repetitive rip cuts. Attaches to parallel guide and accepts the same stops for cuts up to 7-11/16" (195 mm). Requires parallel guide for use with guide rail. (Guide rail not included).	495 718	\$130.00
8	Parallel guide extension set Includes 495 717 and 495 718.	P00108	\$325.00

Festool Tip: For

repeated parallel cuts or rips, the FS-PA parallel guide (see above) registers the guide rail from a given edge to cut in alignment to that edge. Optional extensions allow referencing from the near edge.

Multifunction tables

Take them anywhere.

A stable workbench is critical to most, if not all, cutting operations and assembly work. The inability to move the workbench from the workshop to the jobsite can be limiting. The MFT/3 multifunction table system is a versatile, flexible, and economical solution that can easily be carried to the jobsite or kept in a workshop.

Portable workstation

Festool Multifunction tables (MFTs) are offered in two sizes. The larger MFT/3, offered in a full and basic version, and has an optimized work height of 35-7/16". The basic version is sold with just the table, whereas the full set includes guide rail supports, angle unit, fence rail & clamp, adjustable stop, and FS guide rail. This makes for the ultimate work station for sawing, routing, sanding, and clamping.

The MFT/3-Kapex is a smaller version of the MFT/3 and is designed specifically for use with the Kapex sliding compound miter saw. It is lower in height and has a smaller work surface than the MFT/3, creating a more comfortable working environment when using the Kapex.

Both tables offer a variety of clamping elements and connectors to connect multiple MFTs. All of this in a portable package that can easily be carried to the worksite or kept in a shop.

Festool Tip: Clamping elements (see page 41) provide lateral clamping force with quick cam action levers. Soft rubber face material protects surfaces while providing secure clamping. Use the clamping elements when routing or sanding to hold the material. No clamps to get in the way of the surface to be worked.

Faster.

- Can easily be carried to a jobsite, due to its compact size and lightweight.
- Set-up quickly for accurate cuts with the guide rail.
- Clamp faster with uniform holes and Festool clamps.

“With the MFT, I now spend less time re-arranging tools and more time actually enjoying woodworking.”

Steve W., Colorado

Easier.

- No additional parts needed for set-up.
- Use with legs folded out, at full height, or folded in and set on the floor.
- Accurate and repeatable cuts with the guide rail and plunge saw or routers.

“I purchased the MFT and TS 55 saw halfway through a kitchen remodel. It is unbelievable what a difference it has made in my ability to make straight, splinter-free cuts on my cabinets.”

Randy A., Washington

Smarter.

- Cost effective—durable long lasting design.
- Versatile—compatible with other Festool systems.
- Precise—accurate cross-cut station when used with saw, guide rail, and fence.

“The MFT allows staff to get difficult tasks completed without a lot of set-up time, thus completing projects quicker.”

Bill C., New York

Festool Fact: The insert plate of the MFT is reversible. The plate can be rotated or flipped over for a fresh work surface. The MFT/3 has threaded inserts for accurate placement and quick replacement.

Festool Tip: Simple, fast, and effortless clamping is possible with the quick clamps (see page 41). For more traditional vertical or horizontal holding power when planing or gluing materials, use the clamps in the T-slots or perforated top.

MFT/3 | The workbench has evolved

The MFT/3 is the perfect height to make work more comfortable. V-groove channels make squaring the miter gauge easier, more accurate and provides a mechanism for attaching accessories. The MFT/3 has many features like perforated tops, side channels for attaching clamps, and folding legs to allow two working heights, as well as easy transport. On the jobsite or in the workshop, use the MFT/3 as a supplemental work surface for sanding, jointing, clamping, or just about anything else.

Guide rail system

For use with TS plunge saws and OF routers; make cut-offs, angle cuts, and compound cuts. Use with a router for dados and flutes.

Many uses

Examples include sawing, routing, sanding, clamping, and assembly operations.

Grid hole pattern

Multiple holes in a uniform pattern are ideal for clamping operations and also reduces weight.

MFT/3 with full hardware kit shown. MFT/3-Basic is also available. See page 40 for details.

Flat and forgiving work surface

The perforated insert plate is flat and makes a great work surface. It is also replaceable.

Tool-less integration of the guide rail system

Quick and easy conversion of the work surface reduces space requirements.

Adjustable leg

One leg can be adjusted to accommodate uneven surfaces while keeping the table level.

Profiles

The V-groove profiles facilitate a range of clamping options, and provide the basis for joining multiple tables together.

Portable

The legs fold in for easy transportation, storage, or for using the table on the floor.

Stable and reliable work surface

Slip-resistant feet ensure a stable work platform through the elimination of table drift. Rigidity is enhanced with the addition of optional cross member supports.

MFT/3-Kapex | The perfect companion for the Kapex

Though this basic, shorter version of the MFT/3 is engineered especially for use with the Kapex miter saw, it delivers the full versatility and features of the Festool multifunction table system. The perforated top is ideally suited for use with MFT clamping accessories, and the V-groove side rails are of the same profile as the full version of the MFT/3, allowing you to use many of the same system accessories.

Kapex stand

A specially-designed height and size for use with the Kapex sliding compound miter saw.

Portable

At only 42 lbs, it is easy to store and transport. Folding legs for two unique working positions.

Robust

Durable materials and high quality construction for long service life.

Flat and forgiving work surface

The insert plates are flat and make a great work surface. They are also replaceable.

Adjustable leg

One leg can be adjusted to accommodate uneven surfaces, while keeping the table level.

Slip-resistant feet

Helps to prevent table drift during usage and provides a layer of protection between the table legs and floor.

Large leg locks

Screw knobs release the legs for easy storage and transport. Knobs are large for easy grip and stand out from the leg to protect the hands when turning.

System integration

Works with Festool clamps and clamping elements to secure a work piece for routing, sanding, or sawing.

Grid hole pattern

Multiple holes in a uniform pattern are ideal for clamping operations.

Festool Tip: Use traditional screw clamps (see right page) in the MFT T-slots to securely hold the material to the table.

Accessories that help you work faster, easier, smarter.

Festool offers a wide variety of MFT accessories. Maximize the workpiece holding potential of the MFT design by using Festool clamping accessories. Material can be fastened to the top using the uniform grid hole pattern on the perforated top. Utilizing the T-slot on the side rails, Festool clamp heads are formed to slide into the T-slots and fasten material at any point. The clamping elements provide lateral clamping force to materials fixed to the top.

No.	Description/Application	Compatibility		Item	Price
		MFT/3-Basic	MFT/3-Kapex		
1	Stop flag Included with the MFT/3 and fully adjustable for setting stop points for repeated cuts. Flip stop action folds out of the way when not being used.	●		495 542	\$41.00
2	Perforated top Durable MDF material serves as a spoil board on the MFT and is easily replaceable. Mounting is simplified with threaded inserts.				
	For the MFT/3 -Basic	●		495 543	\$134.00
	For the MFT/3 -Kapex		●	495 544	\$113.00
3	Cross members Attach to legs and frame of the MFT for additional stabilization of the table. (2 pieces)	●		495 502	\$75.50
4	MFT Connector Robust steel bars for connecting multiple MFT tables together. Adjustable set screws ensure solid and stable connection. (1 piece) (2 are needed). Note: MFT/3 does not connect to MFT 1080 or MFT 800 tables.	●	●	484 455	\$14.50
5	Screw clamps Traditional screw clamp design with unique head to be used in the bottom continuous T-slot of the guide rails to securely clamp to material. (2 pieces)				
	Clamping thickness 4-11/16" (120 mm).	●	●	489 570	\$35.00
	Clamping thickness 11-13/16" (300 mm).	●	●	489 571	\$44.50
6	Quick clamp Ratcheting mechanism allow for easy lock and quick release and a secure grip on the material. Utilizes bottom T-slot of guide rail for limitless positioning. For use with FS guide rails and MFT. (1 piece)	●	●	491 594	\$38.00
7	Clamping elements Clamp material from the edges or sides using the grid hole pattern for uninterrupted surfaces. Works with square, round, or irregular shaped material. (2 pieces)	●	●	488 030	\$94.00

Storage

More time working, less time searching.

Festool's dedication to "making work less like work" has always been a driving force behind product innovation. One of these innovations emerged in 1993 and has continued to be developed and improved upon ever since: the SYSTAINER®. An innovative system for organizing, packing and transporting tools, accessories, and consumables. Never before has equipment been organized so systematically with so much time saved as a result.

The Ultimate in organization

Systainers form the foundation for a well-organized workshop or worksite. The smart, award-winning design makes protecting, storing, stacking, combining, and transporting tools and accessories easier than ever. Custom inserts are designed to hold Festool tools, accessories, and consumables to help you quickly find the items you need to complete a task.

Sortainers incorporate the same great features as our Systainers. They include features like integrated handles, but add the convenience of locking drawers for easy access and more flexible organization. Store tools, accessories, and small parts in these easy to use work boxes.

When it comes to mobility, Festool provides you with two options – the Systainer cart and Systainer-Port. The Systainer cart is a simple solution for moving Systainers and Sortainers around the workshop. For the ultimate mobility solution, choose the innovative Systainer-Port. With height-adjustable ball-bearing supported sliding drawers, drawer locking mechanism, wheel brakes, and flat, non-slip top, you will become organized and more productive than ever before.

Festool Tip: Festool Systainers are available with or without tools or inserts. This allows them to be used for storage of other items in your workshop or for the road. The width and depth stay the same for easy stacking and latching. Different heights are available for larger items. The inserts can also be customized to fit any shape.

Faster.

- Move several Systainers at one time with the inter-locking latch system.
- Transport with the optional wheeled cart or the Sys-Dock feature found on Festool CT dust extractors.
- Access tools and related accessories quickly.

“The most useful Festool tool I own has been the Systainers. It just takes me minutes to move my tools around the house and seconds to find screws and bits. Voila — I have a portable and compact workshop!”

Elizabeth L., Arizona

Easier.

- Stackable design.
- Easier transport and storage because of their uniform footprint.
- Multiple sizes and types for different applications.

“I have been on the road for a year as a traveling woodworker. The Festool Systainers keep tools and parts organized, take up a small amount of room in a small RV and are moved easily from the rolling workshop to the jobsite. Excellent design, construction and very convenient.”

Shawn R., Arizona

Smarter.

- Detachable latches for color coding of tools (green and grey).
- Flush latches and recessed handle—will not get hung up during transport.
- Protect, store, organize, and transport system accessories and tools.

“Systainers help me maximize my time wood working. Having all the items I need organized and paired with the tool they go with is invaluable.”

Navin R., California

Festool Tip: To find the right tool quickly and easily, Festool Systainers have an image of the tool printed on the labels found on the front and one side. Each Systainer that is designed for a specific tool also has the serial number for that tool on the label. When sharing a workspace with another Festool user, match your serial number to keep your tools separated.

Festool Tip: The latches for Systainers come in two colors and are removable. This makes it possible to 'code' your Systainer by switching the latches from front to back.

Systainers | Organization made easy

Good organization is the key to efficiency. Sold standard with most of our tools, Festool Systainers offer professionals a strong, flexible, and convenient way of storing, carrying, and combining tools and accessories. Designed to seamlessly connect to one another and with Festool Sortainers, Systainers make it possible to create portable workstations. By attaching tool and accessory Systainers to a Sortainer filled with complementary items, you create a total work solution, and a convenient way of taking your tools to the work.

Options to suit your needs

Available in 7 sizes to cater to your every need (5 shown here: Mini and Maxi also available). Insert tools, accessories, fasteners, router bits, saw blades, or consumables.

Locking latches

Systainers can be attached to one another, to a CT mobile dust extractor or to a rolling base, called a SysCart.

Stackable

All standard Systainers have similar dimensions for easy stacking, storing, and transport.

Long service life and stability

Made of durable, robust, high-quality ABS.

Surfaces

All surfaces are flat when latched. The handle and latches do not protrude beyond the surface—reduces snags.

Oversized handle

Large, centrally positioned, oversized-handle is strong enough for heavy loads and has enough clearance between the handle and lid to be carried while wearing gloves.

Mobility

Can be mounted on an independent rolling base, called a SysCart, or mounted on CT dust extractors via Sys-dock feature for quick and easy transportation.

Improved organization

A place for everything and everything in its place. Time-consuming searches are history.

Award-winning

Setting new standards for innovation, function, and design, the Festool Systainer has won numerous awards.

Sortainers | The perfect Systainer complement

Keep small parts sorted and organized. These versatile drawer sets latch onto Systainers and CT dust extractors, and are the same dimensions as a Systainer 3 (15-5/8" L x 11-5/8" W x 8" H). Sortainers open up endless possibilities. For example, by latching a tool Systainer to the top of a Sortainer, you have a self-contained carrying case complete with a tool and its consumables and accessories. Or latch a Sortainer and Systainer to a CT dust extractor for a rolling workstation—especially useful when working on-site.

Locking latches

Multiple Sortainers can be attached to one another, to a CT mobile dust extractor or to a rolling base to create portable workstations.

Flexible drawers and compartments

The sortainer is available in many configurations. Drawers and compartments can also be configured with insert dividers.

Stackable

Equal dimensions and recesses are uniform for easy storage and transport.

Many variations

Sortainers are available in 12, 9, 6 and 4 drawer configurations. All Sortainers share the same footprint.

Stability

Reinforced with aluminum profiles and a honeycomb structure.

Accessibility

Drawers can be inserted or accessed from both sides and lock in place to prevent accidental spills.

Dividers

Several slots in each drawer for dividers. Each divider is flush with the top of the drawer.

Labels

Each drawer front has a recess, with protective cover, for labeling.

Latches

Each drawer features a pull-out lock that helps to prevent the drawers from being removed or falling out unintentionally.

The Systainer-Port | Organization on wheels

A clean and well-organized shop is the hallmark of a successful professional. With enough space to store tools, accessories and parts, the Systainer-Port becomes a workstation on wheels, allowing you to work faster, easier, and smarter. Everything you need can be organized, labeled, and stored in these sturdy metal organizers. Features like ball bearing casters and locking brakes allow you to move your tools effortlessly across the shop floor and lock them in place while you work. Height-adjustable ball bearing supported drawer slides can be configured for different size Systainers and Sortainers.

Storage system and single drawer safety feature

Quick and easy access to parts, accessories and consumables, assisted by clear labeling. As a safety feature, only one drawer can be open at a time.

Mobility

Sys-Ports can be mounted on bearing rollers for easy mobility. Ball bearing casters (included with each Sys-Port).

Maximum space utilization

Height-adjustable drawers can be adapted to different Systainer heights. Also features a two-way drawer lock for secure and safe use.

Durable

Robust construction for maximum performance and a long-service life.

Lock system

The Sys-Port can be locked to secure drawers for transport and prevent theft.

Improved organization

A place for everything and everything in its place. Time-consuming searches are history.

Stability

Locking brakes prevent the Sys-Port from accidentally rolling away.

Time savings

Fast and convenient access to tools.

Anti-slip rubber surface

The rubberized top can be used for resting tools and work pieces, while you work.

**Accessories
that help you work
faster, easier, smarter.**

Festool offers a wide assortment of inserts and accessories to make Systainers and Sortainers more useful. Abrasives, router bits, tools and accessories can be securely stored in pre-configured Systainers. For greater flexibility, use one or more of the available inserts, dividers, or containers to create your own options for keeping items and small parts organized.

Systainer accessories

No.	Description/Application	Item	Price
1	Systainer cart Mobile platform for Systainers maximum load 110 lbs. Comes with 4 locking straps.	492 388	\$75.00
2	Plastic compartments for SYS 1 box SYS 1 box sold separately. See page 49.		
	Red, 12 pieces (54 x 54 x 63 mm) (not shown)	487 657	\$14.00
	Yellow, 6 pieces (108 x 54 x 63 mm) (not shown)	487 658	\$10.50
	Blue, 3 pieces (108 x 108 x 63 mm) (not shown)	487 659	\$7.50
	Green, 2 pieces (162 x 108 x 63 mm) (not shown)	487 660	\$7.50
3	Tool organizer High-quality wooden insert keeps hand tools organized, easy to get and go. No more digging around for the right tool. Insert comes with SYS 4.	491 301	\$132.00
Foam inserts for Systainers			
4	Foam insert set Dimpled insert (for lid), 1 base insert and 1 diced insert to convert empty Systainers to SYS Vari configurations.	487 427	\$21.00
5	Foam inserts for SYS-MAXI (not shown)		
	For lid	491 633	\$15.00
	For bottom	491 632	\$11.00
6	Foam insert for lid for SYS-MINI (not shown)	491 638	\$5.50
7	Diced foam insert Diced sections can be pushed out to produce any desired shape. 2 inserts in set. Replacements for SYS Vari.	487 428	\$13.50
8	Foam insert for SYS 1—SYS 5 (not shown)		
	For lid	491 640	\$5.50
	For bottom	491 642	\$5.50
Foam inserts for application Systainers			
9	Systainer insert For LR 32 hole drilling set accessories.	489 432	\$36.00
Other accessories

Plunge-cut saws

Setting the standard for precision.

Festool TS saws deliver radial arm saw, miter saw, table saw performance, with panel saw-precision in a versatile, portable design. We invented the guide rail/saw over 45 years ago, and have continuously set new and higher standards for laser-straight precision cutting with our plunge-cut saws.

Glue-ready cuts every time.

Can your circular saw make a laser-straight cut every time? Or can it make a cut out in a very expensive piece of wood without you sweating over how it will turn out? How about creating glue-ready cuts without the need for rework? Maybe it is time to upgrade.

Nothing beats the convenience of the TS 55 for cutting down panels. Big on power, small in size, the TS 55 makes quick work of sheet goods with greater accuracy and fare more versatility than a panel saw. When paired with the MFT/3, it rivals the precision and capability of most other table and miter saws.

When you need more capacity, turn to the TS 75. MMC electronics mean that your cuts will be burn-free and glue-ready, even in thick or stacked material. Plus, with the slip clutch, minimize the risk of kickback. With 1600 watts of power and almost 2-3/4" of cutting capacity, cutting three or four sheets at a time is a breeze.

Festool Tip: Quickly and easily trim doors to size with a single pass. The guide rail system (see page 31) and zero clearance splinterguard (see page 59) allow for perfect alignment on the scribe line. Because of this, the TS saw cuts straight and smooth for a perfect fit.

Faster.

- Faster with the zero clearance guide rail and splinterguard.
- Change the FastFix saw blade in just a few simple steps.
- Reduce clean-up time and have a healthier work environment with integrated dust extraction design.

“The TS saw is the most valuable tool I own. I use it in cabinetmaking and installing. It speeds up my work and is so accurate. I have sold a lot of people on this tool out in the field. It is the one tool I will never replace.”

Dennis M., Oregon

Easier.

- Do the work of a table saw, sliding miter saw, radial arm saw, and panel saw.
- MMC electronics offer soft start, constant speed under load, variable speed, temperature and overload protection.
- Cut more accurately with easy depth adjustment in mm increments.

“With the TS 55, I now own a ‘mobile’ table saw! Precise, easier and faster set-up time, furniture-quality cuts with NO chip out and more importantly; I can use it vertically, diagonally and horizontally! Try that with a table saw!”

Harlan B., Washington

Smarter.

- Deliver finish-quality cuts the first time, eliminating rework and material waste, with the guide rail.
- Achieve cleaner cuts with no tear-out with the splinterguard.
- Triple motor bearing extends service life—three bearings take the load.

“The accuracy of the plunge saw and rail system is amazing, no matter how you set the angle! This system has taken away the need to drag out the table saw for cutting sheet goods. Thanks Festool!!”

Jason W., Vermont

TS 55 EQ | Setting the standard for portable circular saws

The TS 55 has redefined the standards for circular saws. A host of refinements were incorporated to create a saw that is lighter, easier to handle, and more accurate than traditional saws. You get almost 2 inches of cutting capacity when used with the guide rail and the 55 mm cutting depth. The plunge action allows you to make precision cut-outs on wood surfaces and flooring. With so many great features, we challenge you to find a smoother cutting, stronger running, and more accurate option in a saw this size.

Guide rail guidance

When used with included Festool guide rails, you have ultimate control over the TS saw for perfectly straight cuts. Add the replaceable splinterguard, and a splinter-free cut is achievable on both sides of the blade.

Scribe line = cut

Set the guide rail to your marks and know that you will cut right on the line, regardless of the angle.

Plunge-cutting action

Simple depth adjustment allows you to expose only the part of the blade necessary for the cut. The plunge action allows cut placement anywhere on the cut line for straight cuts or cut-outs into material.

Riving knife

Spring-loaded riving knife (splitter) retracts into the housing during plunge-cuts. The riving knife keeps the cut kerf open so that the material does not pinch the blade. This reduces the chance of kickback, leaving you in control of the operation.

MMC electronics

Variable speed allows you to match the speed of the saw to the material. The electronics also maintain a consistent speed under load, improving cut performance and protecting the saw's motor from thermal and current overload.

Rotating dust port

Direct dust away from the saw, user, and the material or connect it to a Festool CT dust extractor for tool-triggered dust capture.

FastFix saw blade changing system

Blade changes are easier and faster using the FastFix system. When engaged, the power switch and arbor are locked simultaneously.

Triple motor bearing

The triple motor bearing improves the smoothness of cutting action and extends the service life of the tool.

Splinterguard on both sides

Splinter-free cutting on both sides of the cut line. Eliminate tear out on both sides of the cut line with the guide rail and replaceable splinterguard. Keeping both sides of the cut line clean means less material waste.

TS 75 EQ | Power and precision in the palm of your hand

Experience the incredible power of the TS 75 plunge-cut saw. Capable of cutting material that is 2-3/4" thick, this saw will leave an edge that is both burn and splinter-free, creating edges that are clean enough to glue without any further prep work. Save time and create matched panels by cutting stacked sheet goods with one cut. Try the TS 75 once, and you will wonder why you struggled so long doing it the hard way. For a more detailed overview, as well as product videos, visit our website.

Power

The TS 75 is our most powerful plunge-cut saw, providing enough power to slice through the toughest of materials with little concern for swirl or burn marks.

Depth of cut

At 2-3/4" depth of cut, the TS 75 can power through thick stock with ease.

Slip clutch

The slip clutch helps to minimize the risk of a kickback and minimizes wear on the blade, gear case, and motor.

Guide rail guidance

When used with Festool guide rails, you have ultimate control over the TS saw for perfectly straight cuts. Add the replaceable splinterguard, and a splinter-free cut is achievable on both sides of the blade.

Plunge-cutting action

Simple depth adjustment allows you to expose only the part of the blade necessary for the cut. The plunge action allows cut placement anywhere on the cut line for straight cuts or cut-outs into material.

Riving knife

Spring-loaded riving knife (splitter) retracts into the housing during plunge-cuts. The riving knife keeps the cut kerf open so that the material does not pinch the blade. This reduces the chance of kickback, leaving you in control of the operation.

Scribe line = cut line

The TS 75 makes the actual cut right on the edge of the scribe line, even on bevel cuts.

MMC electronics

Variable speed allows you to match the speed of the saw to the material. The electronics also maintain a consistent speed under load, improving cut performance and protecting the saw's motor from thermal and current overload.

FastFix saw blade changing system

Blade changes are easier and safer using the FastFix system. When engaged, the power switch and arbor are locked simultaneously. The saw is also locked into a position to facilitate easy arbor bolt removal.

Cutting depth on guide rail	1-15/16" (50 mm) straight down and 1-7/16" (37 mm) at 45°	2-3/4" (70 mm) straight down and 2-1/8" (55 mm) at 45°
Cutting depth without guide rail	2-1/8" (55 mm) straight down	2-15/16" (75 mm) straight down
Arbor size	.787" (20 mm)	1.101" (30 mm)
Weight	9.92 lbs (4.5 kg)	13.6 lbs (6.2 kg)
Price	\$500.00	\$625.00

Festool Tip: There are two ways to set the depth of plunge saws; one is to measure the thickness of the material then add it to the thickness of the rail (5 mm). Then add a few millimeters to the depth setting to ensure full cut-through. For example: Cutting 18 mm thick plywood—add 18 mm + 5 mm (guide rail thickness) + 3 mm (to cut-through) = 26 mm cut depth.

As a second option, align the guide rail with the edge of the material; set the saw on the rail and plunge down (do this unplugged) to expose the blade. Once the blade is below the bottom of the material by approximately 1/2 tooth, set the depth stop.

**Accessories
that help you work
faster, easier, smarter.**

Increase versatility and extend your range of applications with Festool plunge-cut saw accessories. Maintain maximum cut performance with replacement splinterguards, or extend reach with longer guide rails. Limit stops reduce the risk of kickback, as well as define start and stop points on the rail. Maximize plunge-cut saw usefulness with system accessories.

Sliding compound miter saw

Innovation, compounded.

Finally, a sliding compound miter saw that combines a large cutting capacity with a compact, lightweight design. Weighing in at just 47 lbs and with an innovative rail-forward system, the Kapex is easy to transport and optimized for use in even the tightest spots.

Features dual line lasers, micro-adjustable bevel control, and 91% dust extraction when used with a CT dust extractor (with a 36 mm hose).

Overview		62
Applications		63
Features		64
Specifications		65
Accessories		66
Blades		67

Big power. Small design.

The KS 120 has a small footprint with a great amount of power. The power and impressive cutting capacity of the KS 120 will make you think that you are working with a much larger saw. This saw has the cutting capacity of a 12" unit and is capable of cutting trim molding almost 4-3/4" tall in the special cutting position, and hardwoods greater than 3" thick, smoothly and precisely.

The saw comes with a MiterFast angle transfer device to eliminate complex angle calculations by copying the angle directly from the wall to the saw. Accurate cuts are made easy with dual line, fully adjustable lasers that clearly define the cut by showing the material that will be removed by the blade. Easy to read, whether feeding stock from the left or the right.

Festool Tip: The KS 120 incorporates a special cutting position, allowing the blade to accommodate larger stock, such as crown molding in the nested position.

Faster.

- Align cuts faster with dual-laser marking system.
- Set miters quickly with cam-action lock system.
- Rapid blade changes with FastFix blade change system.

"I work in a small cabinet shop and saw my boss setting up the Kapex. My first thought was, 'That's slick, but we already have a chopsaw.' Now, that chopsaw is resigned to rough cuts only. We use the Kapex when it counts, and it's always right."

Alec S., California

Easier.

- Work in tight quarters with the rail-forward design.
- Eliminate complex angle calculations with the Miterfast angle transfer device.
- Set the bevel angle easily and precisely with counter spring system and fine adjustment.

"The Kapex reduces mistakes and time spent on setup. It is so nice not to have to get out my square to make sure my saw is zeroed out. I use my CT 33, with very little dust, which makes it really easy to use in a house or office."

Bruce J., Texas

Smarter.

- Capacity of a 12" miter saw in a 10" miter saw design.
- Delivers highly-efficient dust extraction with the attention to air flow and system components.
- Precision cuts mean less rework and tighter joints for a better finish.

"I've had many of the other top brands of chopsaws, but none of them where as intelligently designed, precisely built, or full-featured as my Kapex. This will be the last chop saw I will ever need to purchase. My motto, 'Spend it once, have it forever.'"

Craig W., California

Festool Tip: The work surface height is equal to the height of a Systainer (SYS 1) for quick jobsite material support.

Festool Fact: The base of the Kapex is a magnesium alloy that is lightweight, with deep ribbing for stability and strength. The base's integrated blade trough also provides additional protection for the blade during transport. Rubber feet in each corner provide slip-resistance to enhance stability on the floor or when fitting into the grid hole pattern of all Festool MFTs.

Sliding compound miter saw | Features

Kapex KS 120 EB | Capacity in a compact design

The Kapex is one of the most advanced sliding compound miter saw in the market. This saw will make cuts that rival the finest trim work being done today. Engineered to be lightweight and compact, the KS 120 is the perfect saw for the work shop or the jobsite. Effective dust extraction, precise cuts, easy adjustments, and quality components are some of the features that should make this saw the number one choice of professional tradespeople.

Compact and lightweight

With a rail-forward design, the Kapex can be placed against a wall for all cutting tasks, maximizing the workspace.

Fine bevel adjustment

Fine bevel adjustment with upfront controls, and large, easy-to-read gauges, coupled with a counterspring mechanism, ensures precise bevel placement.

Capacity

With the special cutting position, the Kapex has a 4-3/4" (120 mm) cutting capacity. 50° left miter and 60° right miter position.

Dust extraction system design

The flexible and removable rubber dust hood to the rear of the blade, deflects the waste material into the directional dust port for 91% efficiency.

Dual-line lasers

Fully adjustable dual-line lasers accurately define the cut area for precise cut placement. Material between the lines will be removed. Easy to align cuts from the left or the right.

MiterFast angle transfer device

Complex angle calculations are eliminated by copying the angle directly from the workpiece to the saw with the MiterFast.

MMC electronics

Most miter saws are not designed to cut anything but wood, but with variable speed capability, the Kapex allows you to match the speed of the blade with the requirements of the material. Permanent magnetic brake, retards blade rotation quickly.

Durable, easy-to-read scales

For easier reading and quick and simple angle adjustment. Oversized bevel scale facilitates precision angle setting and improves readability.

FastFix saw blade changing system

FastFix mechanism locks the blade for easier changes. Saw blade can be changed in just a few simple steps.

Weight	47 lbs (21.5 kg)
Price	\$1300.00

Festool Fact: The Kapex is designed to integrate into all Festool multifunction tables. The spacing of the round rubber feet and their diameter allows the base of the Kapex to "drop" right into the perforated plate. Festool also offers a clamping kit (see page 66) to securely fasten the base to any Festool perforated plate via the integrated flush mount pocket.

MFT/3 and MFT/3-Kapex can be found on page 35.

**Accessories
that help you work
faster, easier, smarter.**

For accurate cuts and better joints, it is imperative to consistently and securely position material, especially crown molding. The crown stop accessory tables increase the work surface, while providing adjustable stop points for positioning material. With their tool-free attachment and V-groove adapter, the tables align perfectly every time. The Kapex can be mounted to Festool multifunction tables utilizing the clamping kit. Additional hold down clamps are available to minimize set-up time (only use one clamp at a time).

No.	Description/Application	Item	Price
1	Crown stop with base extension Adjustable stops support nested workpieces at any angle. Base extensions provide enhanced material support to the left or right, and enable additional clamping possibilities when used with Festool FS clamps. (1 base extension and 1 crown stop included, 2 are needed).	494 369	\$85.00
2	MiterFast angle transfer device Copy and transfer angles to the Kapex accurately. Center of cut line is specially coated for alignment using the dual laser system. Captures inside and outside corners. Aggressive locking mechanism helps to maintain settings.	494 370	\$140.00
3	Hold down clamp Fast-acting, cam action clamp features non-marring material to protect the workpiece while providing excellent clamping ability. Foot piece is specially shaped to accommodate clamping stock close to the fence.	494 391	\$65.00
4	Clamping kit Secure the Kapex to an MFT or work table through the base with the clamping kit. Oversized hand knobs for easy installation and removal. (2 pieces)	494 693	\$17.50
5	Quick clamp Easily locked and quickly released. Can be used to secure the Kapex to an MFT or in the T-slots in base extensions to secure material to the saw. For use with MFT and guide rails.	491 594	\$38.00
6	Screw clamps Can be used to secure the Kapex to an MFT or in the T-slots in base extensions to secure material to the saw. (2 pieces)		
	Clamping thickness 4 11/16" (120 mm).	489 570	\$35.00
	Clamping thickness 11 13/16" (300 mm).	489 571	\$44.50
7	MFT/3-Kapex A specially-designed height and size for use with the Kapex sliding compound miter saw. Using the MFT/3-Kapex with the Kapex mounted, brings the work surfaces to the same level for stock support. See page 39 for more details on MFT/3-Kapex.	495 565	\$390.00
8	Kapex extension set Material support with flip stops for accurate and repeat cuts. Attaches to crown stops. With stabilizer bar to connect to MFT. Conveniently sold as a set. Consists of 495 968 (right side) and 495 969 (left side).	P00107	\$700.00

Anatomy of a Festool saw blade

Festool saw blades are engineered and designed for cutting efficiency, long-life, and superior cutting results. Festool offers seven different circular saw blades for various applications. This range of blades covers everything from cutting wood, plastics, non-ferrous metals and steel* to special materials like solid surface, acrylics and laminates.

Some Festool circular saw blades feature variable tooth spacing, which results in reduced vibration producing cleaner cuts and less noise. All blades have laser expansion slots to reduce warping related to heat build-up. This means all cuts have the best quality over the blade's lifespan and better cut performance. These slots also reduce vibration. Low vibration = cleaner cut. Festool circular saw blades have large arbor holes which serve to reduce vibration and increase blade stability.

*With TS 75 only

Tooth shapes

Alternating top bevel—ATB Offset tooth saw blade

The teeth on this saw blade cut alternately to the left and right. The alternate tooth saw blade is a universal blade for all types of wood.

Triple chip—TC Trapezoidal flat tooth saw blade

With trapezoidal teeth, the edges of the teeth are beveled on both sides. They alternate with the flat teeth when cutting into the material. This tooth shape is for cutting aluminum, hard plastic, and materials with hard coatings.

The right blade for the job

The combinations of shape, type, and number of teeth are suited to meet the needs of your specific application and material. Blade RPM also has a significant effect on the cutting result, which is why Festool TS saws are designed with variable speed capability.

Color code	Material	Speed range
	Wood /Soft plastics	3 - 6
	Plastic	3 - 5
	Steel	3 - 6
	Non-ferrous metal	2- 4

Pendulum jigsaws

The beauty of precision.

Festool brings a new level of precision to jigsaws and jigsaw blades. The two of these together can create effortless cuts with the high-performance, 720 watt motor, controlled by MMC electronics for consistent cuts through most materials. Smooth curves, splinter-free cuts, and less sanding are all possible with a Trion jigsaw blade.

Stay on course.

Most jigsaws have a hard time staying on course, resulting in the need to recut or sand. The Festool Trion jigsaw solves the problem with adjustable carbide tipped jaws that provide three-way blade guidance. A splinterguard protects against chipping, leaving you with a clean, precise cut through the entire depth of the workpiece, with little or no finishing required.

Trion jigsaws come in two designs; the low profile barrel grip PS 300 and the shorter D-handle PSB 300. Both saws have the same specifications and accept Festool precision jigsaw blades. The only difference is the shape of the barrel/grip, which is a preference of the user.

Festool Fact: The power to cut through thick stock, keep the cut straight, and have no tear-out is a tall order for any jigsaw. With patented blade guidance, powerful compact motors, zero-clearance splinterguards, and specially-designed blades, Festool jigsaws tackle all of these requirements with ease.

Faster.

- Change blades quickly with the FastFix quick release system.
- Stays on course. That means spending less time sanding and recutting.
- Work faster by virtually eliminating clean-up with integrated dust extraction.

“After purchasing the PS 300, my 14-inch bandsaw now sits quietly in the corner of my shop collecting dust. I do remodeling, cabinet and finish work and my jobs go faster with little cleanup. The dust collection is great.”

Ted M., California

Easier.

- Follow a scribe line without drifting and wandering.
- Cuts through the toughest stock due to the high performance motor and robust internal mechanism.
- Experience total control with ergonomic design and low vibration.

“The ease factor definitely comes into play with this jigsaw. Couple that with ergonomics and less strain to do the same work, this tool is a winner.”

Richard F., Florida

Smarter.

- Cut precisely with the three way blade guide that keeps the blade exactly at pre-set angle.
- Ensure splinter-free cuts with the splinterguard.
- Starts up smoothly and maintains a consistent cutting speed for cleaner cuts with MMC electronic motor control.

“From cutting curves in 2-inch thick stock for a rocking horse, to working fine details in 1/4-inch thick walnut, to cross-cutting thick timbers for outside structures, the Festool jigsaw is an amazingly versatile tool that takes up very little of my precious shop space.”

Daniel L., California

Festool Tip: For cutting thick stock, Festool recommends using the gold-colored Trion jigsaw blades (see page 78), which minimize blade deflection for truer, straighter cuts.

Festool Fact: Using Festool Trion Jigsaws with splinterguards (see page 77), ensures splinter-free cuts with any blade, with virtually any material. Simply insert a fresh splinterguard when changing blades. After inserting the blade, press the splinterguard in against a stationary surface (like the MFT), while running to fully seat the splinterguard. You now have a true zero clearance, custom matched to the blade.

The Trion PS 300 EQ | Designed to fit your hand with a low profile

Most jigsaws have a hard time staying on course. Hard material and curves can easily cause the blade to deflect, resulting in time consuming re-cutting or sanding. Trion jigsaws are designed with adjustable carbide-tipped jaws that work with the blade clamping system and back-up bearing for triple blade guidance that keeps the blade perpendicular to the shoe at all times, even on curves. The barrel grip PS 300 is designed to fit your hand with a low center of gravity.

Carbide guidance system

Rigidly supports the blade at exactly the pre-set angle, reducing blade wander in tight radius cuts; eliminating cutting errors, spoiled workpieces, or need for rework.

FastFix

Allows for quick, tool-free blade changes. FastFix lever opens the chuck for easy blade removal or changes.

Zero clearance splinterguard

Solid one-piece splinterguards mount in the foot of the tool for zero-clearance, resulting in ultra-clean cuts with no splinters or tear out.

MMC electronics

Festool Jigsaws feature soft-start that softens start-up jolts, variable speed control so the blade speed can be matched to the material need, constant speed under load for consistent blade tip speed and improved cut quality.

Non-marring sub-base

The non-marring, plastic sub-base allows you to work on finished material without concern for damage or marking.

Variable stroke

Four unique stroke settings vary from straight plunge action for smooth cuts to aggressive orbital action for rapid cuts.

Dual-port extraction and chip deflector

Efficient dust extraction design features pick up ports on both sides of the blade with through the base dust channels. Forward chip guard captures and direct chips.

13' Plug-it power cord

Festool Plug-it system allows you to quickly switch between the jigsaw and just about any other tool, reducing downtime, and simplifying packing.

Dual bevel base

45° dual bevel for angled cuts and a zero degree detent for perpendicular cuts.

The Trion PSB 300 EQ | Easy, one-handed control with D-handle grip

The secret to splinter-free cuts is full material support at the cutting point. Trion jigsaw splinterguards are designed to be cut by the blade for perfect zero-clearance between the blade and the splinterguard. The resultant cut is clean through the entire piece with little or no finishing required. The D-handle PSB 300 features a fingertip trigger and smaller profile grip. The PSB 300 has all the qualities of the PS 300, with the addition of a comfortable D-handle for easy one-handed use.

MMC electronics

Features soft-start, variable speed control so the blade speed matches the material, constant speed under load for consistent blade tip speed, and improved cut quality.

Dual-port extraction and chip deflector

Efficient dust extraction design features pick up ports on both sides of the blade with through-the-base dust channels. Forward chippguard captures and directs chips.

Variable stroke

One straight plunge action setting and three progressive orbital modes.

Carbide guidance system

Rigidly supports the blade at exactly the pre-set angle, reducing blade wander in tight radius cuts; eliminating cutting errors, spoiled workpieces, or need for rework.

Zero clearance splinterguard

Solid one-piece splinterguards are cut with the blade mounted in the machine. This gives you precise zero clearance for ultra clean cuts with no splinters or tear out.

FastFix

Allows for quick, tool-free blade changes. FastFix lever angles and opens the chuck for easy blade removal.

Non-marring sub-base

The non-marring, plastic sub-base allows you to work on finished material without concern for damage or marking.

13' plug-it power cord

Festool Plug-it system allows you to quickly switch between the jigsaw and just about any other tool, reducing downtime, and simplifying packing.

Dual bevel base

45° dual bevel for angled cuts and a zero degree detent for perpendicular cuts.

Festool Fact: Accurate guidance for precise cuts—The Trion has 3-way blade guidance—based on the pendulum rod, rear guide roller, and the patented CP (Carbide Precision) guide plates situated at the point of cutting. The blade stays at exactly the pre-set angle, for precise cuts of all kinds, including bevel cuts, and for reduced blade wander in tight radius cuts, eliminating cutting errors, spoiled workpieces, or need for rework.

**Accessories
that help you work
faster, easier, smarter.**

Maximize the versatility of your Festool jigsaw and maintain splinter-free performance with genuine Festool jigsaw accessories. Whether doing circle cut-outs or guided cuts, Festool has you covered. Unparalleled cut performance is easy to maintain with a supply of fresh splinterguards.

Anatomy of a Festool jigsaw blade

Festool T-shank jigsaw blades are engineered and designed for cutting efficiency, long life and superior cut results. The T-shank design is universal, fitting for most professional jigsaws. Festool carries different jigsaw blades for various types of materials.

The range covers everything from blades for cutting wood, plastics, non-ferrous metals, and steel to special materials, like fiberglass and foam. The blades are also designed for various types of cuts, including: straight and splinter-free, with the use of the splinterguard; curved; bends and curves; and through thick material.

Key to tooth / pitch / type / material

Conically ground teeth for clean cuts

Hard soldered carbide tipped splitter, fine

HCS tool steel: the standard quality for all wood materials

Corrugated blade, precision milled teeth

HS bimetal: long service and high cutting capacity

Carbide tipped (HM): resistant to high temperatures and hard-wearing

(Metric dimensions binding). Fits both PS and PSB.

FESTOOL

OF 2200 EB

www.festool.com

Made in Germany

Routers

A router for every need.

Manufactured to exacting tolerances and with the highest quality materials, Festool routers are designed to be both accurate and long-lasting.

Whether you are trim routing laminate or making heavy cuts in hard maple or solid surface material, we offer a router to meet nearly every application. These routers offer unprecedented levels of usability with their built-in dust extraction, guide rail compatibility, and clever accessories.

Take a new route.

The MFK 700 makes trim routing easier than ever. With its ability to easily change from vertical to horizontal positions, it is one of the most versatile trim routers on the market. In addition to a trim router, Festool offers three portable plunge routers to cover your needs.

The OF 1010 is the smallest plunge router Festool offers, but it is still powerful, and its one-handed operation makes this tool extremely maneuverable. The OF 1400 is our most versatile router. Even at less than 10 lbs, it still offers power, precision, depth of cut, and dust extraction to simplify your routing tasks.

Routing decorative edges on thick maple or solid surface materials is easy with the extra power and plunge capacity of the OF 2200. Capable of making smooth, chatter-free cuts in most materials, this router is the king of all routers.

Festool Fact: With its impressive 3-5/32" (80 mm) depth of plunge and the ability to plunge below the base, the OF 2200 exposes more of the bit, which is perfect for template routing.

Faster.

- Maintain constant speed under load with MMC electronics.
- Fast, accurate and tool-free router depth adjustments.
- Quick bit changes, due to the easy access design.

"The ease of use and precision of the OF 1010 without the need for supplemental measurements amazes me and helps me complete work faster, cleaner and without costly mistakes."

Michael W., California

Easier.

- Jobs require less physical effort, because of the high power and low weight.
- Accurate control and greater comfort with the ergonomic handles.
- Lockable triggers and variable speed control.

"Everyone has a unique way to do what we all hate, trimming edging. Finally a tool that eliminates all of the nonsense and makes it easy, and dare I say...enjoyable?"

Mike B., Arizona

Smarter.

- Precise to 1/256" (1/10 mm) depth adjustment accuracy.
- Near-total dust extraction for a cleaner work environment.
- Routers combine with Festool guide rails for straight and repeatable cuts.

"The OF 2200 is more adaptable than I realized. Just when I think I can't do something with it, I realize Festool already thought of it and figured it out."

Glen G., New Jersey

Festool Tip: All Festool routers feature the ability to use parallel edge guides (see pages 85 & 93) for fluting, grooving, and dados; indexing from an edge. To assist bit placement to the scribe mark, Festool routers have index lines scribed into the base to indicate center of cut.

Festool Fact: Festool plunge routers offer 360° rotating chip catchers that capture and channel chips up and into the hose port, designed for highly efficient dust extraction in edge forming applications.

MFK 700 EQ | Precision and flexibility in a trim router

With its modular design and tool-less base changes, the MFK 700 can easily transform from a vertical to a horizontal position with a few simple steps. Trim laminate and edge band or rout grooves for inlays easily with the lightweight and maneuverable MFK 700. Packed with features, this trim router saves you money by allowing you to use bearing-less bits when used with the attachable base feeler bearing. 1/256" (1/10 mm) fine depth adjustments and exceptional dust extraction make this an ideal router for all of your light routing tasks.

Modular

One motor, multiple bases, tool-less change. Vertical and horizontal bases are wide for greater stability.

Micro-adjustability

1/256" (1/10 mm) fine adjustment for precision trimming applications.

Dust extraction

Above and below base dust extraction for edge forming or other standard router operations.

The MFK Basic is sold with the vertical base only. The MFK Set is sold with both the vertical and horizontal bases.

Auxiliary handle

Increased controllability with two grip positions for two-handed operation.

MMC electronics

Soft-start for no jolt start ups, constant speed under load for improved cut quality, thermal and overload protection for prolonged motor life.

Edge guidance

Accessory parallel edge guide for guided fluting, and grooved cuts.

13' Plug-it power cord

Cord design enables rapid interchangeability with most other Festool tools, reducing downtime between tool changeovers.

Multiple collet sizes

1/4" and 8 mm collets available, which allows you to run a variety of bits for more routing options.

1.5° horizontal base

Standard with the set and specially-engineered angled base for trimming edge banding, without damaging the work surface. Slightly pitched at 1.5°, leaving the work surface, without a scratch. This base also features a recess for inside corners.

Power consumption	720 watts / 6.0 amps	720 watts / 6.0 amps
Drive shaft speed	10,000 - 26,000 RPM	10,000 - 26,000 RPM
Column stroke	9/16" (14 mm)	9/16" (14 mm)
Maximum bit diameter	1" (26 mm)	1" (26 mm)
Weight	4.2 lbs (1.9 kg)	4.2 lbs (1.9 kg)
Price	\$400.00	\$525.00

Accessories that help you work faster, easier, smarter.

Whether trimming laminate or doing fine detail work, the MFK 700 has you covered. Broaden the scope of possibilities with multiple base solutions, or perform guided cuts with the optional parallel edge guide.

		MFK 700 EQ	
No.	Description/Application	Item	Price
1	Clamping collets		
	1/4" (6.35 mm) collet with nut	488 761	\$31.50
	8 mm collet with nut	488 755	\$31.50
2	Parallel edge guide Create groove, flutes, dados, ploughs and rabbets in parallel to an edge with 1/256" (1/10 mm) fine adjustment ability. Included dust extraction hood accepts standard 27 mm hose.	495 182	\$48.50
3	0° Horizontal base unit Designed for straight routing. Features 1/10 mm (1/256") adjustment.	491 427	\$150.00
4	1.5° Horizontal base Allows for the usage of bearing-less bits, while providing a no-file edge. Includes base, bearing set, and dust hood.	495 165	\$150.00
5	Feeler bearing set (not shown) Adjustable guide bearing for use with 0° and 1.5° horizontal base when using bearing-less bits.	495 368	\$33.50
6	Plug-it power cord (replacement) 13' long, 18-gauge power cord.	490 649	\$36.50

The OF 1010 EQ | Small in size, but big on performance

The ergonomics and precision features of the OF 1010 EQ deliver a host of benefits which add up to an unbeatable tool. One-handed operation allows you to switch it on and off, plunge, cut and release with ease. The compact design and the balanced center of gravity make this tool extremely maneuverable. Its micro-adjustable depth control is accurate to 1/256" (1/10 mm). The OF 1010 EQ is also the lightest router of its kind—a real plus on extended projects. This, on top of enough power for all 1/4" and 8 mm bits.

Ergonomic handle

Full-grip handle is designed for increased control and reduced fatigue. Integrated switch with variable speed at the thumb allows use with just one hand.

Dust extraction

Integrated dust extraction port extracts dust from the point of generation, increasing visibility and saving valuable clean-up time.

Precision depth adjustment

Micro-adjustability to 1/256" (1/10 mm) allows you to dial in your routing with tremendous precision.

System integration

Designed for use with the FS guide rail system for guided cutting, VS 600 for joinery applications, LR32 hole drilling system, MFS multi-routing templates, and a wide range of other accessory options.

Depth turret

3 adjustable position depth stop turret for repeatable and consistent step cutting.

13' Plug-it power cord

Cord design enables rapid interchangeability with most other Festool tools, reducing downtime between tool changeovers.

Versatility and power

In a lightweight package (less than 6 lbs) the OF 1010 is easily manageable for most common routing tasks, and at 1010 watts, it has plenty of power to boot.

MMC electronics

Electronic controls provide constant speed under load for improved cut quality, step-less variable speed for different applications, and overload protection for longer life.

Switch lock

Locks the power switch on, so you can maintain control from a variety of grip positions.

The OF 1400 EQ | Our most versatile router

The OF 1400 Router provides 1400 watts of power in a machine that weighs less than 10 lbs. It accepts 1/2", 1/4" or 8 mm bits. With enough power to handle most routing tasks and small enough to be extremely maneuverable, the OF 1400 is the one router every tradesperson should own. With a category-leading 2-3/4" plunge depth, precise to 1/256" (1/10 mm), this router gives you the power, precision, depth of cut, and dust extraction capabilities that will simplify your routing tasks.

Power

With 1400 watts and MMC electronic controls, the OF 1400 is a mid-sized router with enough power to tackle even your largest projects.

Ratcheting spindle

Faster and easier bit changes with one wrench ratcheting action.

Double column clamping

One knob locks the plunge depth securely, for less motor to plate deflection.

Dust extraction

Integrated dust extraction port extracts dust from the point of generation, increasing visibility and saving valuable clean-up time. The port is angled so that the hose stays in line with the power cord.

Precision depth adjustment

Micro-adjustability to 1/256" (1/10 mm) with detents for each 1/10 mm.

Swiveling chip deflector

Included chip deflector can be used with edge forming bits, maximizing chip and dust extraction even around curves and corners. Attaches and releases quickly with tool-free spring clip system.

Tool-less inserts

Template guide bushings are self-centering and can be inserted tool-free. The swiveling chip deflector can also be attached and removed without tools.

2-3/4" plunge depth

Enhanced depth is especially useful when routing on top of a template.

System integration

Designed for use with the FS guide rail system for guided cutting, VS 600 Dovetail jig for joinery applications, LR 32 hole drilling system, MFS multirouting templates, and a wide range of other accessory options.

OF 2200 EB | You might think it is a portable shaper

The OF 2200 is our most powerful router. It can easily plunge into 8/4 hardwoods and make a 1/2" groove in a single pass. With 2200 watts of power, you might think you are working with a portable shaper. Designed for exceptional maneuverability, the OF 2200 incorporates many ergonomic design features, making it easy to control, and a pleasure to use on the jobsite or in the shop.

Power

With 2200 watts and MMC electronics, it has enough power to tackle a wide range of materials from soft woods to solid surface.

Interchangeable base system

At the core of the OF 2200's range of capability is a quick-change, tool-less base plate system, allowing you to quickly switch between application specific plates.

Ergonomics

30° offset base for improved guidance, angled handles for more natural grip positioning, and finger tip controls for power, plunge lock and speed.

MMC electronics

Electronic controls provide constant speed under load for improved cut quality, step-less variable speed for different applications, and overload protection for longer life.

Four position depth stop

Two adjustable positions, one fixed position and one special finishing pass position for repeatable and consistent step cutting.

Double column clamping

One knob locks the plunge depth securely, for less motor to plate deflection.

Tool-less inserts

Template guide bushings are self-centering and can be inserted without the need for additional tools.

Dust extraction

Clear, 360°, dust extraction hood contains dust and chips while maintaining full visibility. Simply press the shroud release button and the shrouds drops into place.

Magnetic brake

Quickly retards collet rotation once the tool has been switched off, saving time, prolonging motor life, and enhancing greater control.

Festool Tip: For edge forming operations that use large bits (like roundovers), Festool offers a Table widener accessory (see page 92). This accessory broadens the base plate for greater stability and includes a larger diameter chip deflector for optimum dust extraction.

**Accessories
that help you work
faster, easier, smarter.**

Accurately-guided cuts can be achieved using guide stops on Festool FS guide rails, or edge guides. Template work is simplified with one piece bushing designs or with the copier scanning set with edging plate and chip deflector. Precise placement of shelf hole pins or European-style cabinet construction is made simple with the LR 32 system. Several base types and a multifunction template system is available. With Festool routers and accessories, the only limitation is your imagination.

No.	Description/Application	OF 1010 EQ		OF 1400 EQ		OF 2200 EB	
		Item	Price	Item	Price	Item	Price
16	Plexiglas® template Route grooves and slots on edge with dual fence guidance system. Integrated ruler and adjustable fences accommodate material from 13/32" (10 mm) to 2-9/32" (50 mm).	495 246	\$264.00	495 246	\$264.00	495 246	\$264.00
17	Hard fiber base runner Customize the solid base piece hole diameter with a plunge bit to meet your needs. Provides support across the entire surface of the router base. Ideal for working with smaller diameter bits especially for greater support on outside corners. Does not have the center bore.	489 229	\$15.00				
18	Table widener Oversized, heavy-duty base plate with integrated rotating chip catcher. Increased hole diameter size for larger edge-forming bits. Increased base width for greater support. Aids starting and finishing cuts with extended base surface.	493 139	\$102.00	493 233	\$120.00	494 682	\$55.00
19	Template guide base Uniform base support surface with dust extraction channels for use with template guide bushings.					494 675	\$47.50
20	Small bore base Accessory base for use with small diameter edge-forming bits. Provides stability on outside corners by extending the base to the inside near the bit.			492 574	\$29.50	494 677	\$47.50
21	Standard sub base (replacement) Standard base that is supplied with OF 2200.					495 217	\$48.50
22	Centering mandrel Center guide bushings and the LR 32 plate to the collet for accurate routing results. Works with 1/4" and 8 mm collets.	492 187	\$25.00	492 187	\$25.00	492 187	\$25.00
23	Dust extraction hood Auxiliary dust extraction hood for use with the VS 600. Captures dust and chips from outside and below the template.	484 453	\$17.00	492 585	\$37.00		
24	Guide rail base kit Includes guide stop and accessory offset base plate for use with OF 2200 and FS guide rails.					494 681	\$100.00
25	Guide stop Adapt routers to the guide rails for perfectly guided cuts. Slot in base engages rib on guide rail.	488 752	\$29.50	492 601	\$70.00		
26	Support Provides support to the OF routers when used with the guide rail. Attaches to base and is fully adjustable. Features graduations for measuring bit diameter and setting points for stopped cuts.	438 608	\$3.50	438 608	\$3.50	438 608	\$3.50

Item No. 495 249 (imperial) and 495 248 (metric). See page 94.

VS 600 | Joining System

Dovetail joints are the hallmark of fine woodworking, but every woodworker knows just how time-consuming it is to get dovetails right. It involves careful calculations and a lot of manual chiseling. Even “simple” butted joints with dowels can present challenges. If the edges of the finished piece are going to come out flush, then the dowel on both workpieces must be painstakingly accurate. This work can be done laboriously by hand, expensively on industrial machinery, or quickly and easily using the VS 600. All you need to do is clamp the template in the jig, place the workpiece against the swivel stop, secure the workpiece, fine-adjust with the eccentric memory ring, and rout. It’s unbelievably fast, and unbelievably accurate—joint after perfectly-fitting joint. You can make beautiful, solid, dovetail, box, or dowel joints in a fraction of the time.

Versatility

Up to seven possible joint types and a working width of up to 24-1/4" (615 mm).

Swiveling template

Results can be checked at any time thanks to the hinged template.

Economical

Unique templates are available separately so you buy only what you need.

Accuracy

Each template can be fine-tuned for perfectly-fitting joints.

Easy set-up

Tool-free template changes.

Swiveling segment

When used with the dowel template, allows for seamless hole indexing.

Long service life

Solid aluminum design with a steel contact bar.

Bench mountable

Hole slots for mounting to a workbench or clamping to the MFT.

Adjustable cams

Enable accurate and repeat positioning of templates.

No.	Description/Application	Item	Price
1	VS 600 joining system Create half-blind or through dovetail joints, box joints or dowel joints using the Festool OF 1010 or OF 1400 routers. Templates and bits sold separately.	488 876	\$366.00
	Locking knob for VS 600 (replacement) Locking knob for clamping bar on VS 600.	490 560	\$13.00
2	SZ 14 half-blind dovetail template For 9/16" (14 mm) wide half-blind dovetails in material 5/8" - 25/32" (15 - 20 mm) thick. Includes flanged 17 mm copy ring (490 770) for OF 1010 router. Specify if ordering for OF 1400 router, which requires copy ring (492 181), shipped at no additional charge.	488 877	\$77.50
	HSS dovetail bit For SZ 14 half-blind dovetail template.	 490 991	\$20.00
	Carbide dovetail bit For SZ 14 half-blind dovetail template.	490 992	\$30.00
3	SZ 20 half-blind dovetail template For 25/32" (20 mm) wide half-blind dovetails in material 13/16" - 1-3/32" (21 - 28 mm) thick. Includes flanged 24 mm copy ring (490 771) for OF 1010 router. Specify if ordering for OF 1400 router, which requires copy ring (492 182), shipped at no additional charge.	488 878	\$77.50
	HSS dovetail bit For SZ 20 half-blind dovetail template.	490 995	\$30.00
	Carbide dovetail bit For SZ 20 half-blind dovetail template.	490 996	\$35.50
4	SZO 14 through dovetail templates Includes two templates. For 9/16" (14 mm) wide through dovetails in material 13/32" - 9/16" (10 - 14 mm) thick. Includes 8.5 mm (490 772) and flanged 17 mm (490 770) copy ring for OF 1010 router. Specify if ordering for OF 1400 router, which requires copy rings (492 179 and 492 181), shipped at no additional charge.	491 152	\$135.00
	Carbide dovetail bit For SZO 14 through dovetail template.	491 164	\$32.00
	Spiral carbide bit For SZO 14 through dovetail template.	490 978	\$52.50
5	SZO 20 through dovetail templates Includes two templates. For 25/32" (20 mm) wide through dovetails in material 9/16" - 63/64" (14 - 25 mm) thick. Includes 13.8 mm (484 176) and flanged 17 mm (490 770) copy ring for OF 1010 router. Specify if ordering for OF 1400 router, which requires copy rings (492 180 and 492 182), shipped at no additional charge.	491 153	\$135.00
	Carbide dovetail bit For SZO 20 through dovetail template.	491 165	\$45.50
	Spiral carbide bit For SZO 20 through dovetail template.	490 980	\$63.50
6	FZ 6 box joint template For 15/64" (6 mm) wide box joints in material 15/64" - 25/64" (6 - 10 mm) thick. Includes 8.5 mm copy ring (490 772) for OF 1010 router. Specify if ordering for OF 1400 router, which requires copy ring (492 179), shipped at no additional charge.	488 879	\$73.50
	HSS spiral bit For FZ 6 box joint template.	 490 944	\$30.00
	Spiral carbide bit For FZ 6 box joint template.	490 978	\$52.50
7	FZ 10 box joint template For 25/64" (10 mm) wide box joints in material 25/64" - 25/32" (10 - 20 mm) thick. Includes 13.8 mm copy ring (484 176) for OF 1010 router. Specify if ordering for OF 1400 router, which requires copy ring (492 180), shipped at no additional charge.	488 880	\$73.50
	HSS spiral bit For FZ 10 box joint template.	 490 946	\$27.50
	Spiral carbide bit For FZ 10 box joint template.	490 980	\$63.50
8	Dowel joint template DS 32 For dowel joints in European 32 mm grid pattern (1-1/4" spacing). Includes 13.8 mm copy ring (484 176) for OF 1010 router. Specify if ordering for OF 1400 router, which requires copy ring (492 180), shipped at no additional charge.	488 881	\$73.50
	Brad point dowel drill router bits for DS 32 3 mm 5 mm 6 mm 8 mm 10 mm	 491 065 491 066 491 067 491 068 491 069	\$35.00 \$25.00 \$25.00 \$26.00 \$27.50

Where the router meets the workpiece.

Festool router bits are high-quality, state-of-the-art products developed for practical applications and tested, monitored and checked under the most rigorous conditions. Our mineral material cutters, for example, leave nothing to be desired: they are the result of customer-oriented ideas and comprehensive testing, paving the way for new working applications.

Festool uses tungsten-carbide alloys for its cutters, which impress with their superb micro-grain quality and density. Tungsten-carbide powder and a cobalt bonding material are fused by extreme heat and pressure. In contrast to a coarse grain structure, the dense material has a long service life and excellent cutting quality. Comparisons reveal the difference.

A non-homogenous surface with a coarse surface structure is shown on the left, and a homogenous surface in Festool's micro-grain quality on the right.

Ultra-modern production lines guarantee precise routing.

Continuous production monitoring and checks guarantee consistent high quality.

Dimensions at a glance (in mm)

- L = Total length of bit
- NL/B = Working length
- D = Cutter diameter
- S = Shank diameter
- V = Minimum clamping length
- R = Radius
- F_Δ = Chamfering angle in °
- ⚠ = n max / maximum router speed

To achieve a perfect routing pattern, the cutter should be clamped directly above the cutter head, or at least up to the marking on the shank.

SIZES

Imperial sizes are provided generally to the nearest 1/32" for reference only, unless otherwise noted. Refer to metric sizes for accuracy. Metric dimensions are binding.

8 mm Shank bits

Festool carries a complete line of router bits in 8 mm shank size. These provide 58% more volume than a 1/4" shank router bit. The greater diameter reduces vibration and is more resistant to bending or breaking. Plus the larger shank allows you to use a larger diameter bit with your router.

¹ For use with VS 600 SZ 14

² For use with VS 600 SZO 14

³ For use with VS 600 SZ 20

⁴ For use with VS 600 SZO 2

⁵ With centering bit and pre-cutter.

With high precision diameters for
dowel joints with the VS 600 DS 32

⁶ With v-shaped tip for splinter-free

through holes

32

33 and 34

35

- ¹ Solid carbide bit.
² Bit for slotted joints with the Festool VS 600 FZ 10, with long edges and precise dimensional accuracy.
³ Bit with long edges and carbide-tipped cutting faces.
⁴ Single-edged bit.

HW Duro-form reversible cutters

HW Duro-Form groove and edge-trimming bits with reversible carbide bits are ideal when you need long service life, high economy and consistent precision. Key differences between carbide tipped Duro-form bits and conventional carbide-tipped bits include:

- Re-sharpening the blunt blades of conventional bits not only costs time and money but also reduces the diameter of the bit. This is not a problem with Duro-form bits.
- Fast replacement of blades means sharp tools are readily available at all times.
- Guaranteed constant bit diameter, thanks to replaceable blades.
- Lower costs after purchase. One reversible bit lasts as long as two to four conventional bits for greater economy.
- The very hard-wearing reversible bits are designed for less cutting pressure for easier work.

Routers | 1/2" bits

1/2" Shank solid surface bits

Routing solid surface material is very demanding. It is tough work for people, machines, and especially the cutting tools. The right router bits take the tough out of routing solid surface material. Whether you are creating an edge profile, preparing a seal, or mounting a bowl, Festool router bits are designed to perform. Better cuts are a result of high quality carbide, keen bit construction, protective bearings, and well balanced design. Improve your results in less time, with less work, using Festool router bits.

Planers

Cut the chatter.

Conventional handheld planers with straight knife cutterheads are both noisy and can leave chatter marks in the cut. These marks require sanding for a smooth surface. Festool planers feature single knife spiral cutterheads that shear-cut the material for a cleaner, smoother cut that is ready to glue or finish. This design also reduces noise levels associated with planing for less user strain and greater comfort.

Just plane smooth.

Smooth cuts are just part of the story with Festool planers. When planing carcasses, trim, panels, or doors, the one-handed EHL 65 is both ergonomic, as well as powerful. With on the fly depth control, spiral cutterhead, and 720 watts (6.0 Amps) the EHL 65 fits the bill for most simple planing procedures.

The HL 850 planer leaves a smooth surface, while removing a full 9/64" of hard maple in a single pass. The special design of the cutterhead allows it to cut flush with the side of the tool, allowing for unlimited rabbet cuts. Create different rustic architectural effects easily with textured cutting heads or use the optional bench stand to convert the planer to a jointer for smaller pieces.

Whether you are looking for the finesse and ease of use of the EHL 65 or have the need for multiple cutting effects, size and power of the HL 850, Festool has the planer for your needs.

Festool Tip: Festool's integrated rotary handle allows fast depth adjustment to a tenth of a millimeter. The thumb lock ensures positive depth control for accurate results every time.

Faster.

- Easy adjustment on the fly with depth controls integrated into the handle.
- Rapid blade changes with single blade planer head design.
- Reduce sanding time with smooth-cut performance.

“What a slick tool the HL 850 planer is – I had to do a lot of beveling on a deck and I was able to obtain a perfect bevel and subsequent fit. A great time saver, much less effort than a hand plane, and the outcome was perfect.”

Jack K., Connecticut

Easier.

- Reduce user fatigue with the ergonomic handles.
- Keep the hose out of your way with dust extraction port to left or right side.
- Less clean-up time and greater work efficiency with highly efficient dust extraction.

“Recently, I had to scribe our custom cherry cabinets against typical, out-of-plumb, wacky walls. I put my HL 850 to the test. The result – one clean scribe cut with no stop/start depth marks and no Richard Simmons workouts carrying heavy casework back and forth. It just doesn't get any easier.”

Matthew F., Ohio

Smarter.

- Adjustment with infinite cutting depth.
- Safer, because the side guard swings up as the rabbet depth increases.
- Produce less noise with the single knife cutterhead.

“Until I started using the EHL 65, noise and vibration were my worst enemies whenever I planed to a sharp line. Now I have the right tool for that delicate job. Quiet, light-weight, and vibration-free, the EHL 65 makes delicate scribes easy work.”

Gary Katz, Nationally recognized author and trim carpenter

Festool Tip: The base of both the HL 850 and EHL 65 features an angled groove for chamfering operations. Adjust the depth setting to control the size of the chamfer.

Festool Fact: With Festool planers, knife changes are a breeze. Because of the single knife cutter-head with self-aligning knives, there are no issues with blade alignment. Each blade is held tight with three fasteners. The knife features recessed points that are tapered, so when inserted in the planer head, the fastener pulls the blade to the correct setting.

EHL 65 E Planer | One-handed operation

So many trimming and planing tasks require working in awkward and sometimes difficult to reach areas. Being able to control the planer with one hand allows easy access for challenging cuts, while leaving one hand free to help secure the material. Not only does the EHL 65 allow for one handed usage, it also produces clean and smooth shear cuts. The spiral single knife cutterhead cuts quickly, quietly, and cleanly for less re-work and great results. Conveniently arrange the dust collection port to either side of the machine for optimum extraction. It is a simple and straightforward machine that performs like no other.

Single hand operation

Ergonomic handle and position for one-handed control.

Single knife cutterhead

Spiral cutterhead design with replaceable cutting knife for a smooth, "chatter-free" cut.

Rotary depth knob

Precise depth control on the fly up to 5/32" (4.0 mm).

Quick blade changes

Loosen three screws, replace the blade, tighten the screws back up and you are done. The blade is self-aligning.

Low operating noise

Easier on the ears for less user fatigue, due to the single knife cutterhead that slices the wood with a shear cut.

Stepless cutting depth

The front rotary knob acts as a depth control with a cut depth up to 5/32" (4.0 mm).

Flexible dust extraction

The dust extractor can be used on the left or right side, depending on your working position, so that it does not get in the way.

Low weight

At only 5.3 lbs (2.4 kg), one-handed use is made easier for vertical usage and greater control.

Slim body design

With a planing width of 2-9/16" (65 mm), the EHL 65 is perfectly suited for planing and scribing edges.

HL 850 E Planer | Unlimited rabbeting

Using an electric planer right up to the edge or on rabbets often produces unsatisfactory results, as the machine leaves a lip that has to be removed by hand—unless you have the Festool HL 850 planer. The HL 850 lets you cut flush to an adjacent surface because it can plane across the entire width of the rabbet. Because the planer head is mounted to one side, it sits flush with the opposite side of the planer housing. The retractable side guard makes planing safer, and it swings up and to the side as the rabbet depth increases. Planing up to the edge in deep rabbets is no longer a problem.

Unlimited rabbeting depth

The planer head allows you to work right up to the edge.

Interchangeable heads

For different effects from distressed to hand-hewn textured effects.

Single knife cutterhead

Spiral, metal carbide, cutterhead design with replaceable cutting knife for a smooth, "chatter-free" cut.

Rotary handle depth adjustment

The front handle doubles as a depth control knob with a cut depth up to 9/64" (3.5 mm).

MMC electronics

Equipped with soft-start for no-jolt starts, and constant speed under load, for consistent cutting speed and smooth results.

Converts to jointer

With the addition of a bench unit stand and angle stop, the HL 850 becomes a stationary jointer for working edges.

Near total chip extraction

Efficient chip extraction with left or right side mounting. For best performance use with Festool CT 22 or CT 33 dust extractors and the D36 hose.

Quick blade changes

Loosen 3 screws, replace the blade, tighten the screws back up and you are done. The blade is self-aligning.

Thumb-lock depth control

Makes depth setting a streamlined one-hand operation so you can easily adjust your depth settings to match the resistance of the material.

Planers | Specifications

[Metric dimensions binding]

Model name	EHL 65 E	HL 850 E

Weight	5.3 lbs (2.4 Kg)	8.6 lbs (3.9 kg)
Price	\$390.00	\$490.00

Festool Fact: The spiral cutter of both the HL 850 and EHL 65 approaches the material with a slicing action, just like when using a hand plane at a skewed angle. This reduces the chatter marks that can happen when the whole knife hits the material at the same time.

**Accessories
that help you work
faster, easier, smarter.**

Create exotic textures and add character to a piece with rustic planing heads. Fine and coarse wavy textures and a scalloped effect to mimic a hand-hewn appearance are possible with one machine. Extend the utility of the HL 850 planer by converting it into a bench jointer for trimming and shaping small pieces.

¹ Antistatic versions are only effective when used with antistatic design (Festool's CT series) dust extractors.

Be more than plane.

The unique design of the Festool planer allows you to create perfectly smooth surfaces as well as distressed or rough-hewn effects. Simply replace the standard planer head with a “rustic” head. This offers many ways of decorating surfaces with different textures.

Festool Tip: When creating rustic architectural effects with the HL 850 and rustic heads, you may consider overlapping the cuts to create wavy and intersecting lines to mimic rough sawn material and to create the desired textured effect. After creating the desired effect, one way to smooth out any tearout and to create an aged and weathered look, is to use the Rotex sander in the aggressive gear-driven mode. This will soften the effect and round off any lines or high spots.

Festool Fact: When using the rustic effect planer heads on the HL 850, the depth setting should be set to the “0” position in the front depth indicator window. Rustic effect planer heads now include a special depth stop to ensure the correct depth setting. The depth stop attaches to the side of the planer where the rabbit depth stop is mounted. It also prevents the planer from removing too much material when creating textured rustic effects.

Joiner

At last, a system that joins everything.

The DOMINO® joining system combines exceptional versatility with simple handling and remarkable precision. You will be amazed to see how the Domino makes true mortise and tenon joinery easy and fast. With its ability to make accurate, durable, and repeatable joints, the Domino goes far beyond the capabilities of a biscuit joiner or any other joining method available.

Mortising made easy.

Panel, frame, face, and even beveled joints are all possible with the Domino® joining system. The unique cutting action and adjustable hole widths make loose tenon joinery faster, easier, and more accurate than ever before.

The Domino tenon is designed to fit precisely into the mortise created by the tool. These tenons are rotation-proof, and have glue expansion slots designed into their surface to ensure a good, strong joint. Stronger than a dowel or biscuit, the Domino system tenons will soon become your preferred method for joinery.

Aligning boards is as simple as making the first cut, and then using the optional cross-stop with aligning pins to index off of the previous cut for perfectly spaced mortises. Mortises can easily be made in thin or round stock using the optional trim stop or handrail fence. Experience the Domino and join the revolution.

Festool Tip: Easy access with the Domino assortment systainer (see page 125). Whether in the workshop or on the jobsite, all your tenons are clearly arranged in the clearly labeled and partitioned SYS 2 systainer.

Faster.

- Mortise quickly and accurately.
- Align joints rapidly with retractable stop pins.
- Adjust easily and precisely with depth stop to five different routing depths.

“While building storm windows for a client, my time was cut in half by using the Domino and CT 22. Instead of three steps to join the frame, I was able to cut mortises in one step, with superior results. Festool makes my job faster, easier, and more profitable – thanks!”

Mitchell R., Indiana

Easier.

- Adjust width of mortises simply with the turn of a dial for easier joint alignment.
- Simple, precise, and intuitive adjustments.
- Reduce the chance of kickback with the patented oscillating cutter action.

“I purchased the Domino to make plantation shutters and was amazed at the ease of use, but even more impressed by the time it saved me – almost incalculable. The shutters turned out great and the Domino almost paid for itself on that job. Thanks Festool for a great product.”

Russell T., Arizona

Smarter.

- Position mortises precisely with the viewing window.
- Create long-lasting mortise and tenon joints in seconds, without sacrificing durability.
- Domino tenon is stronger than biscuits and more flexible than dowels.

“A customer wanted some cabinet carcasses, so I bought the Domino thinking I would save some time. Boy, was I wrong – I saved a monumental amount of time! Assembly is easy and the tenons are strong. Now, this customer’s bids state: ‘cabinet carcasses using Domino joinery method!’”

Nicholas V., Illinois

Festool Fact: The Domino cutters can last from 4,000 to 15,000 mortises, depending on the material being cut. How do they achieve such a long life? The high quality of the cutters combined with the patented mortising action reduces the chance of heat build-up as the cutter is always moving.

Festool Tip: When indexing with stop pins, you can confirm the position from the edge or adjoining mortise, with the triangular verification window. The joint placement should align to the top of the triangle.

DOMINO® DF 500 Q Joiner | The evolution of joinery

Joining has always been a slow, difficult process. Never again, thanks to the Festool Domino joining system. The system consists of the Domino joiner and pre-fabricated, beech and sipo Domino tenons. The Domino joiner, with its revolutionary cutting method, simple indexing features and adjustable mortise sizing, makes flawless mortises every single time. The Domino tenon is equally as impressive—it is 100% rotation-proof and far stronger than either biscuits or dowels. It also has a large gluing surface area for extra strength.

Patented routing principle

The spiral cutter rotates and oscillates to create perfect mortises.

Hole width adjustment

Adjusting the width of the mortise allows for easier alignment when joining panels.

Positioning

With an adjustable fence angle, retractable stop pins, adjustable cutter height with step gauge, and precise mortise depth stop, the Domino joiner enables precise mortise placement and spacing.

Pivoting fence

Fence creates angled mortises from 0-90° with positive stops at 22.5°, 45°, 67.5°.

Depth control

Quick, precise adjustment for five different mortising depths, relative to the size of the tenon required for the application.

Stepped height stop

7 different step positions for different material thicknesses for fast and easy fence height adjustment.

Dust extraction

Your mortises are clean and ready for glue when the Domino is used in combination with a dust extractor. Proper dust extraction greatly extends cutter life.

Carbide tip spiral bit

Durable, long-lasting bit withstands 5,000-14,000 joints depending on material.

Rapid bit change

Means you can change a bit in under 30 seconds to match desired tenon size.

Accessories
that help you work
faster, easier, smarter.

Extend the range of the Domino® joining system with fence attachments and an assortment of different tenon sizes and types. Use the Cross stop fence with its spring-loaded stop pins for setting accurate and consistent spacing of mortises. To center a mortise on narrow stock, use the Trim stop attachment. And, on round stock (like handrails), use the handrail fence. Since your applications range from small to large, a full assortment of tenons is available, with color coded cutters to match.

No.	Description/Application	Item	Price
1	Cross stop For repeat hole spacing between 3-7/8" and 8-1/16" (100 mm and 205 mm).	493 488	\$60.00
2	Trim stop For narrow material between 7/8" and 2-3/4" (22 mm and 70 mm) in width.	493 487	\$50.00
3	Handrail fence For centering on round stock 1-3/8" - 2-3/8" (35 mm - 60 mm) in diameter.	494 847	\$60.00
4	Plug-it power cord (replacement) 13' long, 18-gauge power cord.	490 649	\$36.50
5	Domino cutters		
	D 5-NL20HW-DF500—for 5 mm tenons	493 490	\$31.50

	D 8-NL28HW-DF500—for 8 mm tenons	493 492	\$34.00
	D 10-NL28HW-DF500—for 10 mm tenons	493 493	\$35.00

A hard-working and durable mortise and tenon joint, without all the work

As with all things Festool, the Domino tenon was designed as one piece of a broader system, and is optimized to deliver maximum joint strength. The Domino tenon is offered in two types, based on need: beech hardwood (Beech Domino tenons) for indoor applications, and sipo hardwood (Sipo Domino tenons) for outdoor applications. The Sipo tenons are perfect for outdoor applications, because they are weatherproof and mold and insect-resistant. Both types of Domino tenons are manufactured of wood from sustainable, cultivated forests.

A perfect fit

An accurately machined mortise and matching Festool Domino tenon creates a perfectly aligned, perfectly fitting joint every time.

100 percent rotation-proof

The rectangular tenon shape prevents rotation of the tenon for a more secure joint...stronger than biscuits and more flexible than dowels.

Maximum stability

Machined from solid wood with expanding pockets and side grooves, Domino tenons provide an ample glue surface area and resist movement.

Drills/Drivers

Different by design.

Our drills look different, because they are different. Crafted to the highest level of German engineering, Festool drills offer a level of quality not found in other drills. From the EC-TEC® brushless motors, to the interchangeable Centrotec® and FastFix® chucks, these drills were designed to work the way you work.

Five drills in one.

The C 12 drill, with its unique shape and design, and user-favorite ergonomics, allows for multiple gripping positions. This enables your arm and wrist to stay in line. The lever-style clutch is easy to see and adjusts to just the right position.

With the T 12 & T 15 drills, Festool goes Lithium. T 12 & T 15 are the culmination of the best technology available today, with Festool unique features. They combine the benefits of our brushless motor design, with long run times and longer service life. Also features Lithium Ion battery technology, with lighter weight, and higher energy density. The T drills offer full size power in a compact and lightweight package.

Thanks to our FastFix chuck exchange design, both drills are incredibly versatile and do the work of five drills in one. For lighter weight and a more compact footprint, the standard 1/2" chuck is removable and can be replaced with a smaller, lighter Centrotec chuck with its full line of interchangeable drill bits and driver tips. All this versatility is combined with a robust built design that features long-lasting, energy efficient, brushless motors, compact transmissions, and electronic health monitoring. And with magnetic bit stowage, even the smallest details are not overlooked.

Festool Tip: The FastFix keyless chuck can be removed and a 1/4" hex bit can be placed in the power output spindle of the drill. Use a 1" long bit in place of the chuck for an even more compact drill.

Faster.

- Change chucks quickly and without tools with the FastFix chuck system.
- Drill and drive rapidly with the high RPM motors.
- Drill, countersink, and drive screws in less time with the Centrotec bit change system.

“With the C 12, I am able to build projects faster, because the tool runs longer. Bits can be changed quickly. With the variable speed, I can apply just the right amount of torque to drill or screw at the proper speed.”

Tim T., Illinois

Easier.

- Five tools in one with FastFix and Centrotec chuck systems (right angle, eccentric, depth stop, compact driver, drill).
- Easily access tight spots with the compact design.
- Increased comfort during extended use due to ergonomic, well-balanced, and lightweight design.

“I love the C 12 drill! I use it on a daily basis. The angle adapter and weight really help out during the day, making my job extremely easy, with less fatigue. I have recommended this drill to all of my friends and coworkers and would recommend it to anyone. Thanks, Festool.”

Jerrold B., Virginia

Smarter.

- One drill + five chucks = complete drilling and driving solution.
- Optimal run times, consistent power at any speed, and longer service life with integrated electronic controls.
- Longer battery life and increased productivity with the efficient motor.

“With the T+3 drills, I am able to use one tool for all drilling & driving in a typical cabinet installation job. The tool quickly drives 3-inch cabinet hanging screws into the hardest of woods, while the FastFix chucks allow the flexibility to drill & drive in the most cramped cabinets.”

Greg B., Manor Redevelopment

Festool Fact: The FastFix right angle, DD-AS (see page 133), and eccentric chuck, DD-ES (see page 133) can be rotated to 16 unique positions. This allows for easy bit placement in any situation.

Festool Tip: Thanks to the internal clutch, the depth stop chuck (see page 133) allows for consistent depth control when setting screws, regardless of the material thickness or density. The chuck is adjustable to 1/10 mm for fine depth adjustment.

C 12 Drill | Versatile and efficient

With the revolutionary EC-TEC “brushless” motor, the durable C 12 can easily power through over a million screws with minimal wear. The brushless motor is extremely energy efficient, which translates into longer run times and fewer trips to the charger. Its compact design allows you to get into more places without the extra bulk and weight of traditional drill designs. Combined with the Festool FastFix chuck system, the C 12 can do the job of 5 drills. All of this power and capability packs nicely into one slim design. Never before has something so small been able to do so much!

Brushless motor technology

EC-TEC motor is long lasting, and energy efficient. Equipped with thermal protection and low battery signal, which protects the motor and battery pack.

Compact design

Compact size, low weight, and optimum center of gravity gets into more places.

FastFix

FastFix tool-less chuck system and accessory chucks dramatically expand the range of the C 12, taking the place of 5 different tools.

Forty-two torque settings

Two speed settings and twenty one distinct torque settings cover the entire range of need, from low speed, high torque to high speed, low torque.

Ergonomics

Compact, full-size drill that offers exceptional balance, low weight, and a rubberized grip for less strain and fatigue.

Independent drill and drive mode

The torque selector switch features a position for drill mode, which overrides the slip clutch for non-slip power to the chuck.

Self-cleaning spring contacts

Every time the battery is mounted, the battery is cleaned for optimum transfer of energy.

Magnetic bit stowage

The magnets in the retaining grooves hold up to six bits, ready for use at any time.

Optimum storage

The C 12 and all FastFix chucks can be easily organized, stored, and carried in the supplied slim Systainer 1. This keeps everything at hand.

T 12+3 & 15+3 Drills | Smart and robust

Imagine a drill that does the thinking for you—it beeps when you have reached your desired torque when driving screws, it beeps when it's time to charge the battery, it beeps if it is being overloaded, and automatically senses whether the battery is Nickel or Lithium. Imagine this drill being a multifunction tool that at one minute is running a 1-3/8" auger bit, then chasing a screw around a corner or up against a wall and even to a prescribed depth. Never again lose your favorite clutch setting thanks to the independent switch for drilling and driving modes. All of this and more is built into the new T +3 drills from Festool.

Lithium Ion Battery

High energy density and lighter weight ratio means less strain and fatigue on the user.

FastFix

FastFix tool-less chuck exchange system and dramatically expands the range of the T-drills, taking the place of 5 different tools.

Brushless motor technology

Designed for longer run times for more screws per charge and longer service life. And, equipped with thermal protection and low battery signal, which means the drill lasts longer.

QuickSwitch

Independent switch quickly changes from drill to drive mode without losing the desired clutch setting.

Fully electronic clutch

Utilizes sensors to immediately and completely disengage the drill motor when the desired torque setting is achieved and is signalled with an audible beep.

Three-year warranty

Festool-exclusive design, which monitors the motor and battery, allows us to offer a three-year warranty.

Backwards-compatible

Drill and TRC 3 charger handle both Lithium and Nickel based batteries, so you can use existing Festool batteries. Also uses existing FastFix and Centrotec accessories and consumables.

Ergonomics

Compact, full-size drills that offer exceptional balance, low weight, and a rubberized grip for less strain and fatigue.

Self-cleaning spring contacts

Every time the battery is mounted, the battery is cleaned for optimum transfer of energy.

Package sets

Description	Package No.	Price (Savings)
Cordless drill C 12 1.3 Ah Includes: C 12 drill; LC 45 charger; (2) 1.3 Ah NiCD batteries; Centrotec starter set; Systainer 1, and all three FastFix chucks: standard, right angle and eccentric.	PC1213S	\$470.00 (\$81.00)
Cordless drill C 12 2.4 Ah Includes: C 12 drill; LC 45 charger; (2) 2.4 Ah NiCD batteries; Centrotec starter set; Systainer 1, and all three FastFix chucks: standard, right angle and eccentric.	PC1224S	\$490.00 (\$81.00)
Cordless drill C 12 3.0 Ah Includes: C 12 drill; LC 45 charger; (2) 3.0 Ah NiMH batteries; Centrotec starter set; Systainer 1, and all three FastFix chucks: standard, right angle and eccentric.	PC1230S	\$520.00 (\$81.00)
Cordless drill T 12+3 Includes: T 12+3 drill; TR C 3 charger; (2) 2.6 Ah Li-ion batteries; Centrotec starter set; Systainer 1; and three Fastfix chucks: standard right angle and eccentric.	564 247	\$525.00
Cordless drill T 15+3 Includes: T 15+3 drill; TR C 3 charger; (2) 2.6 Ah Li-ion batteries; Centrotec starter set; Systainer 1; and three Fastfix chucks: standard right angle and eccentric.	564 250	\$575.00

Accessories that help you work faster, easier, smarter.

No drill comes close to the versatility of the Festool design. FastFix chucks seamlessly change your 1/2" chuck drill to a right angle drill to an offset drill to a depth stop drill in seconds. And, with the Centrotec chuck system, changing between bit holders and drill bits is fast and easy.

The Festool Centrotec® difference

What do you consider to be most important when choosing the correct bits and accessories for your drilling and driving needs? Quality fit and finish certainly would be at the top of that list, in addition to precision, durability, and versatility. The Festool Centrotec system offers all of these qualities and more. And, when using Centrotec bits with the Centrotec chuck, weight is reduced to minimize fatigue, compact dimensions are maintained and ease of use is very high. Festool offers a variety of solutions for pre-drilling, countersinking, and centering as well as long lasting bit tips. Our HiQ bit tips are engineered for maximum wear-resistance and edge retention, ensuring a better fit, drive after drive.

Sanders

50 years of sanding expertise.

Superior dust extraction, very low vibration, long service life, and a perfect finish are the results of a sanding system in which all of the parts are designed to work together. Festool offers a full line of sanders and abrasives to meet the needs of the professional user in every step of the finishing process.

Unique Jetstream system

With our patented jetstream pad design, air flows through an additional hole in the center of the pad, moving dust to the outer holes, where it is extracted (**Figure 1**). Festool jetstream technology, combined with dust extraction, reduces the surface temperature compared with non-jetstream pads (**Figure 2**). Continuous air flow significantly improves dust extraction, prevents debris accumulation and clogging, and increases abrasive life (**Figure 3**).

When sanding dust is removed from the sanding surface, the abrasive wears more evenly and will last longer. Longer abrasive life and more reliable work results mean you spend less time sanding and achieve better results. With Festool's Jetstream technology and efficient dust extraction, Festool abrasives give you better results and save both time and money.

Figure 1

Less dust accumulation: the air flow continuously removes the dust.

Figure 2

Lower surface temperature: the flowing air cools, which means temperatures are up to 86° F lower than competitors'.

Figure 3

Less clogging: less dust and heat, so nothing can clog.

Jetstream
design

Non-Jetstream
design

StickFix System

With its mechanical fastening design, the StickFix system allows quick and efficient abrasive changes. Festool StickFix provides a secure, non-slip bond for better results. Abrasives can be easily removed when desired. You will save time when changing abrasives and you will save money by re-using slightly worn abrasives.

Sanding for a superior finish

A great finish starts with great prep work. Creating a flat and smooth surface is sure to reveal the beauty of the material you are working with. Sanding with power tools is a quick and efficient way to achieve your desired results.

One of the most important things to consider is the desired final result. Also to be considered is the material to be sanded. This will have an impact on the choice of sanding tools, as well as abrasives.

To understand how to get what you want out of sanding, you must first understand what is happening at the surface. Sanding is about scratching and minimizing the pattern of these scratches. The key is to minimize the scratches to the point of not being noticeable, while providing the desired results. Each grit of abrasive on the paper is a cutting tool. The depth to which each tool cuts is related to its grit size. The lower the grit, the deeper the cut or scratch.

To minimize these scratches, it is imperative to work through a range of grits that progressively minimize the impact caused by the previous grit. So you must work up through the grits sequentially. Where you stop with that process is what determines the final result. If you stop early in the sequence, the surface texture will be rougher and the scratches may be more visible because they are deeper and more noticeable. Conversely, starting with too fine of a grit may not remove enough surface blemishes, machining marks, or irregularities, which will prolong sanding time with the finer grits.

When you use tools that feature dual action like random orbit sanders or dual-mode Rotex sanders, you will employ a different feed rate than you would with orbital or linear sanders.

Thanks to the action of random orbit sanders, they cut very efficiently so a slow and methodical feed rate and pattern is desirable. Experiment on scrap material to observe the scratch patterns and coverage from different feed rates. Overlapping the pad by one-half is desirable to ensure even and consistent coverage. No more pressure than what is required to control the machine should be applied. More pressure inhibits the rotation of the pad, which slows down the rate of stock removal, is difficult to be consistent and causes fatigue to the user.

Orbital sanders are excellent fine finish tools and the cutting action is easy to use and control. Feed rate is a little faster than that used with random orbit sanders. Running an orbital sander is similar to using a spray gun in terms of feedrate. The key is to not let the sander stay in one place too long.

A linear sander is unique in that there is no orbit or circular motion. The pad and action is in a straight line. The LS 130 moves back and forth in a straight line, which works well in line with the grain of the material. This action also lends itself to working with moldings where any other action would change the detail of the piece.

To improve finish results, remove the sanding dust before proceeding to the next grit. This dust is the same size as the last grit that was used. If the dust is not removed, the dust will be coarser than the next sanding grit and will thus hinder your progress toward the perfect finish. Highly efficient dust extraction, like that found on Festool sanders helps reduce the amount of sanding swarf left on the material. A test wipe with a clean bare hand reflects what dust or swarf is left on the piece that should be removed.

In sanding, there are several variables to control. The technique of the user has primarily been discussed. Technique alone is not enough to achieve that superior finish. Choosing the right sander and abrasive of high quality make a significant impact to the finishing result.

More information about Festool sanders and abrasives is contained in the following pages.

Rotex and Rotary Sanding

The Rotex RO 125 and 150 sanders offer dual-mode settings, two pad sizes, and tremendous sanding flexibility. The dual-mode settings, rotary and random orbit, allow you to use these sanders for aggressive and fine sanding, and polishing.

The RAS 115 is specially designed for stripping layers of coatings and rough shaping. It is gear-driven for high torque and low speed, which is ideal for fast, controlled stock removal. The lower speed prevents abrasive discs from overheating and clogging.

All Festool sanders are designed and built with dust extraction efficiency as a primary consideration. In addition, they all are equipped with Festool's own mechanical fastening design, StickFix. This system provides a secure, non-slip bond, while allowing for quick abrasive changes.

Festool Fact: Festool invented the dual-mode Rotex sander in 1982, but we didn't stop there. Today's Rotex sander is the 4th generation in the evolution of this revolutionary tool. The new generation is so advanced that no two parts are the same from any previous version.

Coarse sanding Efficient material removal and a clean sanding pattern with the Rotex rotary motion, which includes a combination of eccentric and rotational motion.

Fine sanding Random orbit motion produces a super-fine sanding pattern.

Polishing The Rotex rotary motion produces shiny, hologram-free surfaces. And, provides high torque output for effortless polishing.

Faster.

- Reduce clean-up time with near total dust extraction.
- Quick abrasive changes with StickFix® (mechanical fastening) pad.
- Faster finish results with variable speed, optimized stroke, and dual-mode action.

“The RAS sander is a workhorse for me. I use it for sanding floors, panels, doors, etc. After an entire day of sanding with this sander and my CT33, I have a super clean space, and customers are extremely impressed. Work fast, clean, and perform a great job!”

Robert S., California

Easier.

- Exceptional ergonomics for comfort and control.
- Low weight and great balance helps to reduce user fatigue.
- Minimal vibration makes it easier on the finish and the user.

“I used my Rotex Sander with my CT 22 Dust Extractor and all I can say is WOW. There was no saw dust, no cleanup needed and a very happy customer. This tool turned a 4 day job into a 3 day job and paid for itself.”

Kevin M., Pennsylvania

Smarter.

- Cost effective—abrasive sheets last longer with dust extraction.
- The complete system approach delivers a better finish, cleaner environment, and longer pad and abrasive life.
- Efficient dust extraction minimizes hazardous dust.

“I was asked to re-finish 5 veneered arched door casings in a church, 9-inch to 16-inch deep. The church has a crystal chandelier worth \$250,000, and there had to be no dust allowed in the air. The Rotex and CT achieved the impossible... no dust in the air, everything in the vacuum. An amazing tool!”

Alistair H., California

Festool Tip: When sanding on or near edges, use the hard pad (see page 167) to preserve a crisp edge on the material. It is also effective for coarse sanding when shaping or producing contours is your intended effect.

Festool Tip: When using the Rotex sanders for polishing, first remove any dust extraction device. Then switch the Rotex into the gear-driven mode (toward coarse dots). Use a green-backed Festool polishing pad (see page 167), along with Festool sponges and felts, to apply compounds, polishes, or waxes. Reduce speed, as necessary, for best results. Finish the surface with a Festool sheepskin as a final step.

Random Orbit Sanding

The ETS 125, 150/3 and 150/5 random orbit sanders are designed with efficiency in mind – the tool does the work, not the person using it. This is because of the sanding action combined with the efficient use of energy, low vibration and highly effective dust extraction.

All Festool sanders are designed and built with dust extraction efficiency as a primary consideration. In addition, they all are equipped with Festool's own mechanical fastening design, StickFix. This system provides a secure, non-slip bond, while allowing for quick abrasive changes.

Festool Tip: How to choose between the ETS 150/3 and

ETS 150/5: The key difference is in the size of the stroke.

The ETS 150/3 has a 3 mm stroke and ETS 150/5 has a 5 mm stroke. The tighter stroke is for fine to superfine sanding and the latter is for intermediate to fine sanding.

The larger the stroke, the faster the feed rate and rate of material removal; the opposite is true for the 3 mm stroke. However, the tighter stroke should produce a tighter scratch pattern, therefore, a smoother surface should be the result. So if you wish to cover more area in less time, choose a larger stroke, and if a super fine finish is desired, choose a tighter stroke.

Faster.

- Integrated dust extraction minimizes clean-up time.
- Low vibration means less breaks and the job is completed faster.
- Optimized combination of backing pads and abrasives means a great result in a short amount of time.

“Because of the ETS 150/5 and CT, our small custom furniture shop has seen measurable improvements. Thank you to the thoughtful engineers at Festool, who clearly understand the function of a tool within a shop. Thanks for holding your standards high, for not compromising and holding true.”

Alison S., Florida

Easier.

- Vibration-stop design reduces user fatigue during extended use.
- Ergonomic designs can be used comfortably with either hand.
- StickFix pad design enables simple changeover between abrasives.

“I work with solid surface and after a day of sanding with my other sanders, my hands were numb. My Festool ETS 150/5 sander smooth, refreshing, rugged, and able to handle long days of finishing. Very nice!”

Ed Herman Fabricators, Pennsylvania

Smarter.

- Jetstream design removes dust efficiently, delivering longer abrasive and pad life.
- MMC electronics deliver constant speed, leading to a more consistent finish.
- Tools and abrasives work as a system, generating exceptional results at each stage of the finishing process.

“Immediately after I used the ETS 150/3, I realized how much smarter I was able to work. Thank you, Festool, for a sander that pays me back —big time. I can only imagine what your other tools will do for me. Thank you, from an excited new Festool user.”

Gary W., Illinois

Festool Tip: Proper sanding

technique when using a random orbit sander is to overlap the pad by half, while feeding the sander at an even pace of about 1 inch per second. For best results use the sander left to right then repeat the same motion front to back. This helps to ensure an even surface.

Festool Tip: The right pad choice is important for the right finish.

The standard soft pad provided with the ETS sander is appropriate for most applications and materials. However, for sanding near edges, it is advisable to use the optional hard pad (ETS 150 only / see page 169). This pad resists deflection to maintain a crisp edge. Conversely, we offer a supersoft pad (see page 169) for ultra fine sanding. You may also use the interface pad for superfine sanding (see page 169). These softer pads absorb the energy of the user and the machine, leading to less penetration of the workpiece and a higher-grade finish.

Orbital Sanding

The DTS 400, RTS 400 and RS 2 orbital sanders, when connected to a Festool CT dust extractor, allow you to achieve excellent finish results on broad surfaces or in tight spaces, with little effort. Designed to sand right up against adjoining surfaces, these sanders are ideal for finishing or refinishing fully-assembled projects. They also feature vibration-stop balanced design to deliver better finish results, smooth operation, and greater comfort.

All Festool sanders are designed and built with dust extraction efficiency as a primary consideration. In addition, they all are equipped with Festool's own mechanical fastening design, StickFix. This system provides a secure, non-slip bond, while allowing for quick abrasive changes.

Festool Fact: In 1951, Festo (now Festool) introduced the world's first orbital finishing sander. It was a revolutionary tool that led to the elimination of countless hours of tedious, hand sanding. This tool was just one step in a rich history of making work faster, easier, smarter.

Faster.

- Minimize cleanup time with integrated dust extraction.
- Fewer work breaks and faster completion time with the low vibration.
- Optimized combination of backing pads and abrasives means a great result in a short amount of time.

“With other brands of sanders, I couldn't use them for more than an hour before my hand hurt, because of my Osteoarthritis. With the RS 2 and other Festool sanders, I can use them almost all day.”

Dmitry C., Louisiana

Easier.

- Vibration-stop design reduces user fatigue during extended use.
- Use comfortably with either hand, due to the ergonomic grip.
- StickFix pad design enables simple changeover between abrasives.

“The DTS 400 allows me to sand right up to the edge of a workpiece. This makes finishing inside drawers and cabinetry much easier than hand sanding. And, it is especially handy when sanding between coats of poly, which I don't usually do until the drawer or cabinet is fully assembled.”

John R., New York

Smarter.

- Optimum material coverage and result with the special pad shapes and strokes.
- Re-use abrasives for greater economy, due to StickFix fastening system.
- Generate exceptional results at each stage of the finishing process with the tool and abrasive system approach.

“The DTS 400 sander and vacuum make sanding, usually the most boring and tedious part of woodworking, a time to reflect on a job well done. This combination is very quiet and keeps the air very clean. Handling the sander is not a major chore anymore.”

Mark T., Iowa

Festool Tip: For the most uniform scratch pattern and best results when sanding veneered surfaces, the RS 2 can't be beat. With an orbital sander of this size, it is easy to cover large surfaces with greater control and with its weight, no additional downward pressure is needed.

Festool Tip: It is possible to use the DTS 400 for sanding up to adjacent surfaces, such as when sanding rabbets or edges. The convex shape of the pad's sides minimizes contact, reducing jolting or kickback.

Specialty Sanding

The Deltex DX 93 and Duplex LS 130 specialty sanders are designed to sand awkward or difficult shapes and spaces. Whether you need to aggressively remove paint from a tight corner, or knock down rough spots between coats, the DX 93 triangular sander has you covered. For finish sanding, reach for the LS 130 linear sander, with its fine linear motion.

All Festool sanders are designed and built with dust extraction efficiency as a primary consideration. In addition, they all are equipped with Festool's own mechanical fastening design, StickFix. This system provides a secure, non-slip bond, while allowing for quick abrasive changes.

Festool Fact: The LS 130 sander is designed to provide true linear motion. The sanding pad moves front to back with a 5/32" (4.0 mm) stroke. The dual counter-weight internal mechanism is tuned to reduce any offset lateral motion. This allows the sander to work right up against an adjacent edge without jolting.

Faster.

- Reduce clean-up time with near total dust extraction.
- StickFix pads for rapid and easy abrasive changes.
- Specialized solutions are vastly more efficient than hand sanding.

"The Deltex sander has made it possible to sand and finish cabinet faces with no dust. The power and variable speed makes it possible to remove stock quickly, and obtain an extremely smooth finish – all in areas that are difficult or impossible to reach with conventional sanders."

Mario D., Montana

Easier.

- Ergonomic body profiles and hand grips for comfortable use.
- Rear dust ports keep hose and cord out of the way.
- Changing pads is convenient with the tool-less design.

"The Deltex is the perfect sander for small and hard to reach areas. Absolutely amazing how you can sand without any dust when it is hooked up to the vacuum. Truly incredible!"

Jared K., Connecticut

Smarter.

- Robust built design for long service life.
- Custom-shaped and specialized pads provide solutions for challenging applications.
- Sanding motions designed for optimum performance.

"As a 40-year experienced millwork professional, my favorite tool is the LS 130. I recently used it to hyper-polish Corian and Figured Walnut to a 12,000 grit mirror finish. The table will retail for more than \$60,000, so it is imperative to have the absolute best."

Art Q., California

Festool Tip: The DX 93 is a favorite among flooring installers, because of its gear-driven orbital action, stock removal rate, and its ability to get into corners when stripping a finish, especially on stair treads.

Festool Fact: Festool offers a range of pre-formed pads (see page 173) for the LS 130 to match nearly any profile. An interface pad (see page 173) allows you to increase the size of any convex or angle pad, and allows you to decrease the size of any radius concave pad. For exact matches you can make your own permanent pad with our Do-it-yourself kit (see page 173) for a perfect fit.

Air Sanding

Air tools offer advantages versus traditional electric power tools. They will not heat up in operation or produce electric sparks. They are lighter in weight and notably quieter. Given the mechanical nature of these machines, they will last up to five times longer than electric power tools.

The LEX 2 150/3, 150/7, and 185/7 random orbit compressed air sanders are ideal for tough workshop applications and continuous industrial use. At the heart of our air tool system is the unique IAS 2 three-in-one hose, which combines air supply, air tool exhaust, and dust extraction in a single conduit.

All Festool sanders are designed and built with dust extraction efficiency as a primary consideration. In addition, they all are equipped with Festool's own mechanical fastening design, StickFix. This system provides a secure, non-slip bond, while allowing for quick abrasive changes.

Festool Fact: The CT 33 can be adapted to support the IAS 2, 3-in-1 hose used with Festool compressed air sanders, which enables auto start triggering of the electric motor. The CT 33 accepts an easy-to-install module that lets the CT know when to actuate by sensing the flow of air to the sander.

Faster.

- Reduce clean-up time with near-total dust extraction.
- StickFix pads for rapid and easy abrasive changes.
- A range of pads and stroke sizes means that air sanders can tackle your larger tasks.

“The addition of Festool tools and equipment has dramatically changed the way I work. As a residential remodeler, quality results, efficient production and a clean work environment are essential elements to a successful project. Thank you, Festool!”

Tom G., Minnesota

Easier.

- Rubberized top grip for total control and comfort.
- Vibration-stop design reduces user fatigue during extended use.
- Low, 73 dB (A) sound level reduces user fatigue.

“While using the LEX series sander, I felt like I was driving a fine sports car – turns were easy, driving was smooth, and it felt more like fun than work. When I was done, the scratch pattern was virtually invisible and clean-up was already done!”

Nancy D., New Hampshire

Smarter.

- Jetstream dust extraction keeps workpiece clean and prolongs the life of abrasives and pads.
- Robust fan motor design for a long service life.
- Sanding pad brake prevents surface damage when finished.

“I have a 6-inch LEX and I am convinced that it is the best air sander in its class. Having all the hoses in one makes life so much easier! It also guarantees that the guys in the shop use the vacuum when sanding! Nobody comes close to Festool's innovation!”

Donny B., Maryland

Festool Fact: Use a Service unit (see page 174) near the LEX compressed air sanders, or some other form of in-line filter, regulator, or lubricator. The closer to the sander, the better to ensure proper operating pressure at the tool, adequate lubrication, and most importantly, clean air. Air becomes hot when it is compressed and eventually cools in the air compressor storage tank or the lines to your sander. This cooling creates condensation and when mixed with the lubrication in the sander, this water creates sludge. This sludge can retard the spinning of the motor and affect sanding performance. Although it is possible to clean the sander to return it's performance, the best long-term solution is a cleaner air supply.

Festool Fact: Most air-driven tools need a vent to exhaust outgoing air. On sanders, this exhaust port usually serves to blow dust around or even expel moisture in the form of water droplets onto the work surface. By using the IAS 2 Festool air hose (see page 174), the exhaust air is returned to the IAS 2 adapter where it is exhausted through a filter. The IAS 2 hose also provides the drive air as well as dust extraction. It is truly 3-in-1.

Rotex RO 125 FEQ | Versatile and easy to maneuver

This sander gives you everything Rotex has to offer in a smaller, lighter package. The RO 125 puts 500 watts of power, dual-mode sanding, and triple-function performance into a comfortable, 4.4 pounds. This 5" sander does it all—coarse and fine sanding, and polishing. The RO 125 incorporates near-total dust extraction, exceptional ergonomics, and many advanced features. This is a small sander that is perfect for big jobs.

Compact size

With a compact form and a 5" pad, the RO 125 delivers performance to even the tightest of places.

Weight

With a low weight of 4.4 lbs, and a variety of grip positions, the RO 125 is ideal for sanding overhead or on vertical pieces.

Power and size

Dual-mode capability means that with 500 watts, the 5" RO 125 can tackle a broad range of sanding tasks.

Dual-mode

Gear-driven, aggressive mode for rapid stock removal or polishing and random orbit mode for fine sanding.

Dust extraction

Jetstream design delivers highly efficient dust removal, resulting in cleaner air, better finishes, and longer abrasive and pad life.

Pad brake

Stops the pad quickly, so you can worry less about damaging your freshly finished workpiece when setting your tool down.

Edge protector

Protective bumper guard allows you to sand right up to adjacent surfaces without concern for damage. Also prevents jolting when sanding close to walls or edges.

MMC electronics

Electronic controls deliver soft-start, step-less variable speed control, constant speed under load, and thermal and overload protection.

Fastfix pad change

Tool-less pad design allows you to quickly transition between pads, minimizing downtime.

Rotex RO 150 FEQ | Refined power

Never before has such a powerful sander been so refined. The Rotex RO 150 changes effortlessly from coarse sanding, to fine sanding, to polishing. Changing sanding pads is simple, and requires no extra tools. 720 Watts of power means the RO 150 can take on any job. Yet its 5 lb. frame, minimal vibration and superior ergonomic design make it so easy to work with. The gear box is completely enclosed and impervious to dust, making the RO 150 extremely reliable, even in the most demanding environments.

Dual-mode

Operate in gear-driven, aggressive mode for rapid stock removal, or switch to random orbit mode for fine sanding.

Power and size

With 720 watts and dual-mode capability, the 6" RO 150 is your full-size option for the toughest tasks.

Dust extraction

Jetstream design delivers highly efficient dust removal, resulting in cleaner air, better finishes, and longer abrasive and pad life.

Fastfix pad change

Tool-less pad design allows you to quickly transition between pads, minimizing downtime.

Edge protector

Protective bumper guard allows you to sand right up to adjacent surfaces without concern for damage. Also prevents jolting when sanding close to walls or edges.

Detachable extraction channel

The RO 150 incorporates a removable extraction channel, streamlining the tool for tasks such as polishing.

MMC electronics

Electronic controls deliver soft-start, step-less variable speed control, constant speed under load, and thermal and overload protection.

Enclosed gear unit

Prevents dust from entering the gear and bearing unit, vastly extending the service life of the tool.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

The RAS 115.04 E | Aggressive stripping and shaping

Removing thick layers of varnish or paint on wood or metal requires either a great deal of patience or a machine with an impressive rate of material removal. The RAS rotary sander by Festool is the perfect choice for stripping and shaping. 500 watts of power concentrated in a 4.5" pad allows you to quickly prepare your work.

Low speed, high torque

Designed for stripping layers of coatings and for rough shaping, the RAS 115 combines low speed with high torque and power.

Directional dust shroud

The RAS features a rotating dust hood, maximizing dust removal, while still allowing you to get right up to adjacent surfaces.

MMC electronics

Electronic controls deliver soft-start, stepless variable speed control, constant speed under load, and thermal and overload protection.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

Comfortable handling

The motor housing on the RAS 115 is small enough in diameter to fit snugly in your hand for easy, effortless use.

Auxiliary handle

Accepts threaded handle for additional hand placement.

Brush inserts

Available in both plastic and metal to match your application.

Electrostatically grounded dust extraction

The dust port of the RAS is grounded to maintain continuity when used with our anti-static dust extraction system.

FastFix pad locking

Locks arbor for fast and easy, tool-less transition between pads.

ETS 125 EQ | Compact finish sander

The versatile ETS 125 has our finest sanding stroke at 5/64" (2.0 mm), and is the ideal one-handed machine for maximum surface quality when finishing or pre-sanding. Compact in size and weighing only 2.4 lbs, the ETS 125 is perfect for sanding vertical surfaces and for doing overhead work.

Tight sanding stroke

With a 5/64" (2 mm) sanding stroke, the ETS 125 produces exceptional fine and superfine sanding results.

Ergonomics

Formed to fit comfortably in any size hand. Compact and lightweight enough for extended vertical and overhead use.

Dust extraction

Jetstream design delivers highly efficient dust removal, resulting in cleaner air, better finishes, and longer abrasive and pad life.

Vibration-stop

Balanced design delivers better finish results, smooth operation and greater comfort.

Pad brake

Stops the pad quickly, so you can worry less about damaging your freshly finished workpiece when setting your tool down.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

Variable speed

Step-less speed control allows you to adjust to the needs of the application.

13' Plug-it power cord

Interchangeable cord design allows you to quickly switch between tools.

Sealed switch

Internally sealed switch is protected from dust for long life.

ETS 150/3 EQ and ETS 150/5 EQ | Finishing specialists

The ETS 150/3 is a favorite for fine sanding and extra-fine sanding, producing an excellent surface finish with a short 1/8" (3.0 mm) stroke. The ETS 150/5, with a 3/16" (5.0 mm) stroke, is perfect for light sanding or intermediate sanding. Both feature a rubberized top grip, ergonomic handle, fingertip switch and vibration-stop balancing to reduce the discomfort normally associated with sanding. These sanders perform on a level that you are not likely to have experienced.

Different strokes

The sanders are distinguished by their stroke size; one for intermediate, and the other for superfine sanding.

Ergonomics

Formed to fit your hand for one- or two-hand operation, with rubberized top grip.

Dust extraction

Jetstream design delivers highly efficient dust removal, resulting in cleaner air, better finishes, and longer abrasive and pad life.

Vibration-stop

Balanced design delivers better finish results, smooth operation and greater comfort.

Pad brake

Stops the pad quickly, so you can worry less about damaging your freshly finished workpiece when setting your tool down.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

MMC electronics

Electronic controls deliver soft-start, step-less variable speed control, constant speed under load, and thermal and overload protection.

13' Plug-it power cord

Interchangeable cord design allows you to quickly switch between tools.

Lockable switch

Allows for uninterrupted running for optimum control and less hand fatigue.

DTS 400 EQ | Corner and edge finish sander

A great all around sander, the DTS 400 is designed for fine sanding small, angular surfaces that are difficult to reach. With a short 5/64" (2 mm) stroke, this sander provides a super-fine finished surface. Both compact and lightweight (2.4 lbs), the DTS 400 is the ideal sander for working on vertical and overhead surfaces. Step-less variable speed improves working results and the vibration-stop balancing makes your work less tiring.

Delta shaped pad

Convex sides for sanding edges and rabbets, and a triangular point for accessing corners. The DTS 400 is the perfect choice for sanding up against edges.

Orbital sanding motion

Full pad contact with controlled and fine orbital sanding motion to minimize swirl marks and produce smoother surfaces.

Vibration-stop

Balanced design delivers better finish results, smooth operation and greater comfort.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

Ergonomic grip

Conforms to your hand to help reduce fatigue during prolonged use.

Turbo dust extraction

Integrated dust extraction system can be used with Turbo dust bag set or with CT dust extractors.

Variable speed

Step-less speed control allows you to adjust to the needs of the application.

13' Plug-it power cord

Interchangeable cord design allows you to quickly switch between tools.

All-around sanding

Compact design and low weight for working overhead or on vertical surfaces.

RTS 400 EQ | Small, flat surface finish sander

A sander well-suited for a wide range of one-handed applications, the RTS 400 is ideal for working on flat, vertical, and overhead surfaces because of its compact design and weight of only 2.4 lbs. Like the DTS 400, step-less variable speed improves working results, and vibration-stop balancing reduces fatigue during prolonged use.

Rectangular pad

Narrow profile allows for sanding on edges and frame members.

Ergonomic grip

Conforms to your hand to help minimize fatigue during prolonged use.

Turbo dust extraction

Integrated dust extraction system can be used with Turbo dust bag set or with CT dust extractors.

Orbital sanding motion

Full pad contact with controlled and fine orbital sanding motion to minimize swirl marks and produce smoother surfaces.

Vibration-stop

Balanced design delivers better finish results, smooth operation and greater comfort.

All-around sanding

Compact design and low weight for working overhead or on vertical surfaces.

Variable speed

Step-less speed control allows you to adjust to the needs of the application.

13' Plug-it power cord

Interchangeable cord design allows you to quickly switch between tools.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

RS 2 E | Light surface sander

The large 4-1/2" x 9" (115 x 228 mm) sanding surface and a 3/32" (2.5 mm) sanding stroke makes the RS 2 the perfect choice for fine sanding large surfaces. Typical applications include intermediate sanding of varnished doors, leveling large surfaces, and fine sanding of delicate stock. This sander is especially good for applications that require an absolutely even surface (like tabletops).

Large rectangular pad

With a 4-1/2" x 9" pad, the RS 2 handles large surfaces quickly and evenly.

Optimum sanding stroke

A tight sanding stroke for efficient sanding action for intermediate and fine sanding.

Additional hand grip

Improved comfort and control.

Orbital sanding motion

Full pad contact with controlled and fine orbital sanding motion to minimize swirl marks and produce smoother surfaces.

Works with sheet abrasives

Abrasive clamping lever allows for the use of non-StickFix and 1/2 sheet abrasives.

Turbo dust extraction

Integrated dust extraction system can be used with Turbo dust bag set or with CT dust extractors.

Vibration-stop

Balanced design delivers better finish results, smooth operation and greater comfort.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

Variable speed

Step-less speed control allows you to adjust to the needs of the application.

The Deltex DX 93 E | A real champion in corners

A versatile sander for difficult and hard-to-reach spots, the Deltex provides excellent sanding results in even the tightest of corners. The Deltex triangular sanding pad and orbital action mean that you can power-sand using the full area of the pad, saving labor and eliminating time-consuming manual sanding in problem areas. The Deltex is the perfect solution when you need those tight spots to look as good as easier to reach areas.

Triangular sanding head

Equal angle corners provide access to tight spots and give you full use of all three abrasive corners.

Orbital sanding motion

Achieve perfect finish results in the tightest of spaces with 2.5 mm stroke, orbital action.

Gear-driven

High torque, gear-driven sanding power for aggressive sanding in tight corners.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

Integrated dust extraction

Pads are designed to efficiently channel dust through the rear port.

Long cord

13' cord to help access those hard-to-reach areas.

Variable speed control

Step-less speed control allows you to adjust to the needs of the application.

Multiple pads

Hard and soft pads are available, as well as a flat extended-length pad for louvers.

Electrostatically-grounded dust extraction

The dust port of the Deltex is grounded to maintain to maintain continuity when used with our anti-static dust extraction system.

Duplex LS 130 EQ | In-line sanding specialist

Festool's Duplex LS 130 EQ linear sander makes detail sanding faster, easier, and cleaner. Rabbets, edges, and profiles are best sanded by a linear motion. Until now, the only tool that could do that was your hand, and there is no dust extraction when sanding by hand. But the LS 130 linear sander powers through detail sanding faster, more efficiently, and without the fatigue. As common as these jobs are, the LS 130 is sure to provide major savings in time and effort.

Pre-formed and custom profiles

A wide selection of pads can be mounted for any application.

True linear performance

Sanding motion imitates hand sanding perfectly for sanding profiles, edges, or rabbets.

3x faster

Power through detail sanding 3x faster than hand sanding, eliminating user fatigue and delivering more consistent results.

FastFix pad change

Tool-less pad design allows you to quickly transition between pads, minimizing downtime.

Integrated dust extraction

Pads are designed to efficiently channel dust through the rear port.

Ergonomics

The LS 130 was designed to fit snugly in your hand for ease of maneuverability, requiring less energy and making your work easier.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

Variable speed

Step-less speed control allows you to adjust to the needs of your application.

All-around sanding

Compact design and low weight for working overhead or on vertical surfaces.

LEX 2 150/3 and LEX 2 150/7 | Finishing refined

A satisfying finish is the reward of the right prep work. The secret to the best finish is to use a combination of the right technique and abrasives with the right sander. The LEX 2 150/3 offers a very tight sanding stroke to minimize scratch patterns and the LEX 2 150/7 offers an aggressive sanding stroke for fast stock removal. A good finish is more than a stain, a sealer, or paint, it is a surface that is absolutely smooth to the touch.

Different strokes

The sanders are distinguished by their stroke length; one for intermediate, and the other for superfine sanding.

Dust extraction

Jetstream design delivers highly efficient dust removal, resulting in cleaner air, better finishes, and longer abrasive and pad life.

Ergonomics

Formed to fit your hand with rubberized top grip cap and unobtrusive dead-man switch.

Vibration-stop

Balanced design delivers better finish results, smooth operation and greater comfort.

IAS 2 connection

3-in-1 hose design; supplies air, extracts dust, and provides an exhaust all through one hose.

Variable speed

Step-less speed control allows you to adjust to the needs of the application.

Pad brake

Stops the pad quickly, so you can worry less about damaging your freshly finished workpiece when setting your tool down.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

Stroke designation

LEX 2 machines are clearly labeled to indicate the sander stroke size.

LEX 2 185/7 | Bigger is better

When it comes to large surface sanding, bigger is better. The LEX 2 185/7 is big all over; big pad, big stroke, big power, and big on longevity. The compressed air family of sanders are our longest lasting sanders with vane motors and few wear parts. At the end of the day, that adds up to a lot of dust. Thankfully, the CT 33 dust extractor (with the Festool-designed service unit option), the Jetstream pad, and the IAS 2 hose can capture the dust and contain it.

Large pad

At 7" (185 mm), the sanding pad covers large surfaces efficiently and easily.

Large stroke

At 9/32" (7.0 mm) the sanding stroke of the LEX 2 185/7 is ideal for rapid stock removal and intermediate fine sanding.

Dead-man switch

The LEX 2 sanders are equipped with a dead-man switch for effortless operation and positive control.

IAS 2 connection

3-in-1 hose design; supplies air, extracts dust, and provides an exhaust all through one hose.

Stroke designation

LEX 2 machines are clearly labeled to indicate the sander stroke size.

Vibration-stop

Balanced design delivers better finish results, smooth operation and greater comfort.

StickFix mechanical fastening design

Fast and easy abrasive removal with resilient pad hooks and hard-wearing fabric backing, leading to longer abrasive and pad life.

Ergonomics

Formed to fit your hand, with rubberized top grip cap.

Pad brake

Stops the pad quickly, so you can worry less about damaging your freshly finished workpiece when setting your tool down.

Sanders | Specifications

Accessories
that help you work
faster, easier, smarter.

Rotex sanders are incredibly versatile not just for sanding and finishing, but for polishing as well. With a tool-less pad change design, matching the right pad to the surface is fast and simple. From applying compound to achieving and maintaining a high-gloss shine, the Festool assortment of sponges and felts has you covered.

No.	Description/Application	RO 125 FEQ 5" diameter (125 mm)		RO 150 FEQ 6" diameter (150 mm)	
		Item	Price	Item	Price
1	StickFix polishing pad Thinner and harder than sanding pads and a smaller diameter to support polishing media such as felts, sponges, and sheepskin.	492 128	\$27.00	493 914	\$25.50
2	StickFix sanding pad—hard Maintain a crisp and flat surface especially on edges. 9 hole (1 piece)	492 127	\$29.50	493 915	\$38.00
3	StickFix sanding pad—soft High-temp resistant for heavy-duty applications and particularly for the aggressive gear-driven Rotex mode. White ring feature on pad face for easy abrasive change. 9 hole (1 piece)	492 125	\$29.50	493 916	\$38.00
4	StickFix sanding pad—supersoft For medium/fine sanding and finishing sanding. The extra softness is more forgiving and allows the abrasive to float easier on the surface for smoother results. 9 hole (1 piece)	492 126	\$29.50	493 917	\$38.00
5	Coarse sponge	For paint surface prep and applying abrasive compounds.			
	20 mm high, 5 pieces	493 844	\$51.00		
	30 mm high, 1 piece			493 845	\$15.00
	30 mm high, 5 pieces			493 846	\$57.00
6	Fine sponge	For applying polishes and waxes.			
	20 mm high, 5 pieces	493 865	\$43.50	493 867	\$52.00
	30 mm high, 1 piece			493 866	\$15.00
	Honeycomb, 30 mm high, 5 pieces	493 872	\$42.00	493 874	\$58.00
7	Hard felt	For polishing new paints, finishes, plastics or wood.			
	1 piece			485 970	\$9.50
	5 pieces	493 078	\$31.00	488 348	\$28.00
8	Soft felt	For pre-polishing new paints, finishes, plastics or wood.			
	1 piece			485 972	\$9.50
	5 pieces	493 077	\$30.00	488 347	\$29.50
9	Sheepskin	For high-gloss polishing.			
	1 piece			484 131	\$16.00
	5 pieces	493 079	\$72.00		
10	Interface pad for superfine abrasive For profiles and contours. The extreme softness and give allows the abrasive to float easier on the surface for smoother results. (1 piece)	492 271	\$17.50	492 212	\$18.50

**Accessories
that help you work
faster, easier, smarter.**

Along with the **ETS** sanders, the right abrasive and pad are the secrets to a great finish. A high-quality sanding pad contributes to consistent surface quality. For maintaining a crisp edge, we recommend hard pads. For contours and profiles, we recommend the supersoft pad. And for general purpose sanding, the standard supplied soft pad is adequate for most applications.

No.	Description/Application	ETS 125 EQ 5" diameter (125 mm)		ETS 150/3 EQ ETS 150/5 EQ 6" diameter (150 mm)	
		Item	Price	Item	Price

* All ETS 150 accessories are correct for use on the RO 150 E (not the RO 150 FEQ).

**Accessories
that help you work
faster, easier, smarter.**

The **DTS**, **RTS**, and **RS 2 E** sanding pads are designed as carefully as the tools for optimum performance and long life. Sanding pads do fatigue over time and need to be replaced. It is advisable to keep a fresh pad at hand to avoid a work stoppage when finishing. The orbital family of sanders feature turbo dust extraction, which allows the use of filter bags for times when using a CT dust extractor and hose arrangement may not be convenient.

No.	Description/Application	DTS 400 EQ 4" x 6" (100 x 150 mm)		RTS 400 EQ 3-5/32" x 5-1/4" (80 x 133 mm)		RS 2 E 4-1/2" x 9" (115 x 228 mm)

**Accessories
that help you work
faster, easier, smarter.**

Replacement pads and extended-length sanding pads are available for the **DX 93** sander. The base plate supports the sanding pads with center snap fastener. The abrasives Systainer has an insert to protect, store, organize, and transport abrasives and pads.

Festool Fact: For best results when sanding, adjust the stepless, variable speed setting toward the turtle icon to lower the CFM rating. This will reduce the likelihood of creating swirl marks in the finish caused by too much pressure being applied to the wood surface while sanding.

		DX 93 E	
No.	Description/Application	Item	Price
1	StickFix sanding pad—hard Snap stud. (2 pieces)	488 716	\$14.00

With the **LS 130**, variety is a good thing. The LS 130 can tackle various profiles with ease by simply changing the sanding pad. With FastFix mounts, changing pads is a snap with tool-free mounting fixtures. Pre-formed pads offer common profiles, while the Do-it-yourself kit offers unlimited matchability. These high quality pads are long- lasting with StickFix mechanical fastening abrasive mounting for rapid, no hassle abrasive changes.

Accessories that help you work faster, easier, smarter.

The Festool **LEX** sanders/compressed air sanding system is refreshingly unique and unmatched in the industry. All the components needed to complement, augment, or enhance your Festool compressed air system are listed below. Whether buying a complete system, building your own, or expanding your current system, the right system accessories are available to keep you running.

		ALL MODELS	
No.	Description/Application	Item	Price
1	CT 33 mobile dust extractor Recommended for use with air powered sanders by utilizing a service unit and the IAS 2, 3-in-1 hose. Very quiet, highly effective and efficient. Fully adjustable power. Full use of collection bag capacity for fewer refills. Flat top for convenient tool storage, or latch on one or more Systainers for a rolling tool cabinet. 8.7 gal / 7.9 gal capacity (vac/bag), 24" x 15" x 22", 72 dB noise level, 350-1200 W power, 134 CFM max suction cap., 90" static water lift (23000 Pa) max vacuum, 32 lbs.	583 368	\$580.00
2	Antistatic hoses Combines air supply, exhaust air, and dust extraction in a single hose. Tool-side rotator connector to prevent twisting. Extremely flexible, tough, non-marring.		
	Length: 11.5'	487 901	\$245.00
	Length: 16.4'	488 176	\$294.00
	Length: 22.9'	488 131	\$359.00
3	Service unit For standard CT dust extractors. Has filter with condensate drain, pressure regulator, oiler, additional oil-free air outlet with quick coupling, prefitted on holding bracket. Includes attachment hardware and air hose.	452 797	\$423.00
4	Compressed air module Adapts standard CT dust extractor with a relay switch so when a stream of compressed air is released, the electric auto-start function is activated.	452 829	\$147.00
5	IAS 2 adapter For connecting the CT dust extractors with IAS 2 air tools using IAS 2 air hoses. Antistatic design. Fits all standard 2" central dust extraction systems.	454 757	\$124.00
6	IAS 2 double adapter To run 2 air tools on 1 CT (also requires IAS 2 Adapter).	454 758	\$184.00
7	Adapter For the IAS 2 hose for general cleaning tasks. Prevents damage to tools and hose that may result if the IAS 2 hose is used for dust extraction without this adapter.	488 418	\$73.00
8	3/8" adapter To convert 3/8" ISO thread to 3/8" NPT.	9397	\$7.00
9	Suction hose holder Keeps hose off floor and at a comfortable height for a neater, safer workplace.	487 072	\$33.50
10	Filter bags—paper Spunbound filter bag with tear-resistant polyester fleece. Filters particles to 5 microns. Integrated flap to close bag. (5 pieces)	452 971	\$35.50
11	Handle Attaches to CT 33. Provides mounting space for service unit.	452 921	\$74.50
12	Boom arm Keeps the cord and hose up and out of your way; requires handle (SB-CT 452 921) to be mounted onto CT 22/33 dust extractor.	492 753	\$250.00

Description	Package Order No.	Price (Savings)
6" Sander LEX 2 150/3 package A CT 33 E dust extractor, handle, service unit, compressed air module, 3/8" adapter, IAS 2 adapter, suction hose holder and IAS 2 anti-static hose (11.5').	PA3691126	\$1198.50 (\$620.50)
6" Sander LEX 2 150/3 package B Handle, service unit, compressed air module, 3/8" adapter, IAS 2 adapter, suction hose holder and IAS 2 anti-static hose (11.5').	PB3691126	\$755.00 (\$504.00)
6" Sander LEX 2 150/3 package C IAS 2 adapter and IAS 2 anti-static hose (11.5').	PC3691126	\$396.00 (\$238.00)
6" Sander LEX 2 150/7 package A CT 33 E dust extractor, handle, service unit, compressed air module, 3/8" adapter, IAS 2 adapter, suction hose holder and IAS 2 anti-static hose (11.5').	PA3691125	\$1198.50 (\$620.50)
6" Sander LEX 2 150/7 package B Handle, service unit, compressed air module, 3/8" adapter, IAS 2 adapter, suction hose holder and IAS 2 anti-static hose (11.5').	PB3691125	\$755.00 (\$504.00)
6" Sander LEX 2 150/7 package C IAS 2 adapter and IAS 2 anti-static hose (11.5').	PC3691125	\$396.00 (\$238.00)
7" Sander LEX 2 185/7 package A CT 33 E dust extractor, handle, service unit, compressed air module, 3/8" adapter, IAS 2 adapter, suction hose holder and IAS 2 anti-static hose (11.5').	PA3691124	\$1248.50 (\$620.50)
7" Sander LEX 2 185/7 package B Handle, service unit, compressed air module, 3/8" adapter, IAS 2 adapter, suction hose holder and IAS 2 anti-static hose (11.5').	PB3691124	\$805.00 (\$504.00)
7" Sander LEX 2 185/7 package C IAS 2 adapter and IAS 2 anti-static hose (11.5').	PC3691124	\$446.00 (\$238.00)

Upgrade from 11.5' hose to 16.4' hose (4488176) for an additional \$49.00.

Upgrade from 11.5' hose to 22.9' hose (4488131) for an additional \$114.00.

Abrasives

From coarse to fine, we've got you covered.

Festool offers a fully integrated sanding solution for all your applications, from aggressive stock removal to superfine, finish sanding.

With a complete line of abrasives in seven different types and grits ranging from 24 to 4000, Festool has the perfect paper to meet your specific application needs.

Festool abrasives, with their high-tech coatings, provide maximum resistance to clogging and smearing, which means longer lasting abrasives and less rework. Save money by reducing costs and achieve consistent, high-quality results.

Abrasive	Material
Cristal	For aggressive sanding of wood, paint, plastics, and fillers.
Brilliant 2	For paints and varnishes, fine sanding on bare wood.
Rubin	For bare wood.
Titan 2	For solid surface and automotive paint.
Saphir	For heavy duty use.
Vlies	For light sanding and degreasing, polishing metal and solid surface.
Platin 2	For super finish and solid surfaces.

**Quality and
innovation
never rests.**

A core element of the Festool philosophy is to constantly design and develop innovative tools that help tradespeople work faster, easier, and smarter. New technologies and approaches arise, requiring that we focus our attention on the future. Though we have moved beyond the tools listed below, we are committed to their support, since so many of our customers continue to derive benefit from them on a daily basis.

Description	Item	Price
Accessories for MFT 800		
Compatible with all MFT/3 ratcheting quick clamps, screw clamps, and clamping elements.	See page 41	
Hardware Kit Adjustable stop for use on MFT 800 / 1080.	494 070	\$142.00
Perforated Plate For MFT 800, 23" x 28" (590 x 725 mm).	488 565	\$53.00
Table profile, long Build your own bigger MFT. Length 79" (2000 mm) (2 pieces)	488 555	\$198.00
Accessories for MFT 1080		
Compatible with all MFT/3 ratcheting quick clamps, screw clamps, and clamping elements.	See page 41	
Hardware Kit Kit to turn an MFT Basic to a MFT 1080.	494 071	\$158.00
Perforated plate For MFT 1080, 28" x 45" (725 x 1165 mm).	489 396	\$99.00
Table profile, long Build your own bigger MFT - Length 79" (2000 mm) (2 pieces)	488 555	\$198.00
Accessories for both MFT 800 and MFT 1080		
Longitudinal stop Adjustable stop for use on MFT 800/1080.	488 564	\$43.00
Angle stop Protractor head for MFT 800/1080.	488 563	\$92.50
Adjustable stop Flag stop for MFT fence.	490 555	\$27.50
Table extension Aluminum work top extension, 10-3/4" x 27-1/4".	489 575	\$143.00
Accessories for ATF 55		
Compatible with all TS 55 saw blades.	See pages 68-69	
Parallel edge guide Only in conjunction with adapter 484 583. Mounts on either side of saw table for rip cuts.	483 278	\$21.00
Stop adapter To fit parallel stop 483 278.	484 583	\$7.00
Chip deflector (replacement)	439 696	\$4.50

Description	Item	Price
Accessories for AT 65		
Parallel edge guide Only in conjunction with adapter 486 314. Mounts on either side of saw table for rip cuts.	483 278	\$21.00
Stop adapter To fit parallel stop 483 278.	486 314	\$13.50
Chip deflector (replacement)	439 696	\$4.50
Standard saw blade Tungsten-carbide, saw blade for coarse cuts in wood, building panels and soft plastics. 190 x 2.8 x 30 mm / ATB tooth shape / 16 teeth.	486 296	\$46.00
Panther saw blade Tungsten-carbide, rip blade with radical hook angle and deep gullets for fast, easy rip cuts. 190 x 2.8 x 30 mm / ATB tooth shape / 14 teeth.	486 298	\$57.50

Limited Warranty

30 Day Money

Back Guarantee

We are so confident that you will thoroughly enjoy our tools, that we offer a 30 day money

back guarantee. If you are not completely satisfied, your full purchase price will be refunded, excluding all freight charges.

1+2 Limited Warranty

Festool offers a 3 year limited warranty, one of the longest in the industry. This warranty is valid on the pre-condition that the tool is used

and operated in compliance with the Festool operating instructions. Festool warrants that the specified tool will be free from defects in materials and workmanship for a term of 3 years from the date of purchase.

Conditions of 1 + 2 Limited Warranty

You are entitled to a free extended limited warranty (1 year + 2 years = 3 Years) for your Festool power tool. Festool is responsible for all shipping costs during the first year of the warranty. During the second and third year of the warranty the customer is responsible for shipping the tool to Festool. Festool will pay for return shipping to the customer using UPS Ground Service. All warranty service is valid 3 years from the date of purchase on your receipt or invoice. Proof of purchase may be required.

Excluded from the coverage under this warranty are: normal wear and tear, damages caused by misuse, abuse, or neglect; damage caused by anything other than defects in material and workmanship. This warranty does not apply to accessory items such as circular saw blades, drill bits, router bits, jigsaw blades, sanding belts, and grinding wheels. Also excluded are "wearing parts," such as carbon brushes, lamellas of air tools, rubber collars and seals, sanding discs and pads, and Festool gear (hats and shirts).

The obligations of Festool in its sole discretion under this warranty shall be limited to repair or replacement or a refund of the purchase price for any Festool portable power tool that is found to have a defect in materials or workmanship during the warranty period. FESTOOL SHALL NOT BE LIABLE FOR ANY CONSEQUENTIAL, INCIDENTAL OR SPECIAL DAMAGES REGARDLESS OF THE THEORY OF LAW ON WHICH THE CLAIM IS BASED. ALL WARRANTIES IMPLIED BY STATE LAW, INCLUDING THE IMPLIED WARRANTIES OR MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY LIMITED TO THE DURATION OF THREE YEARS.

Some states in the U.S. and some Canadian provinces do not allow the limitations on how long an implied warranty lasts, so the above limitation may not apply to you. This warranty gives you specific legal rights, and you may also have other rights that vary from state to state in the U.S. and from province to province in Canada.

With the exception of any warranties implied by state or province law as limited above, the foregoing express limited warranty is exclusive and in lieu of all other warranties, guarantees, agreements, and similar obligations of Festool. Festool makes no other warranty, express or implied, for Festool portable power tools. No agent, representative, distributor, dealer, or employee of Festool has the authority to increase or otherwise change the obligations or limitations of this warranty.

Repairs

If your Festool power tools require repair, you must contact our Service Department at (800) 554-8741 for authorization and address details. To expedite the repair, please fill out and enclose the Repair Order Form. Download the form at www.festoolusa.com. No collect shipments will be accepted. No Festool hats, shirts or other wearables may be returned. Also contact our Service Department at the telephone number listed above if you have any questions about warranty claim procedures.

Returns

If you need to return your Festool tools for any reason, please return it to the dealer from which you originally bought the tool.

Instruction Manual

Warning

To reduce the risk of personal injury and for best optimum tool performance, be sure to read, understand, and follow all the safety and operating instructions in the instruction manual before using the tool. An instruction manual is furnished with every tool. If yours is lost or if you have questions, please call (888) 337-8600 for a replacement.

Health Warning

Various dusts created by power sanding, sawing, grinding, drilling, and other construction activities contain chemicals known (to the State of California) to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are: lead from lead based paints; crystalline silica from bricks and cement and other masonry products; arsenic and chromium from chemically treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: always work in a well ventilated area. Festool recommends to use dust extractors with every power tool. If the inhalation of dust nevertheless exceeds the ambient (background) level, wear a respirator approved by NIOSH/MSHA for the material at issue.

Disclaimer

Festool reserves the right to make changes or improvements on its products without incurring an additional obligation to make corresponding changes or improvements to products previously manufactured or sold. Festool reserves the right to discontinue products at any time without notice. All illustrations and photographs displayed in this catalog are the property of Festool and shall not be duplicated or reproduced without the express written consent of Festool. Specifications & photographs are as of 2.1.09 and are subject to change without notice. Any unauthorized use of a trademark without express written consent is strictly prohibited.

Festool is not responsible for typographical errors. Prices are subject to change and are only valid for sales shipped within the United States.

Note: The following is an exemplar Festool limited warranty. The actual warranty that comes with your power tool is controlling.
